

Mini-memory

Top view, facing the console.

Memory

- **ROM:** A 4 Kbytes ROM labelled 8234 C71084
- **RAMs:** Two piggy-backed HM6116LP-4 static RAMs, 2 Kbytes each.
- **GROM:** A 6 Kbytes GROM, labelled CD2215NL 8231,

Selection logic

- **32:** Quad OR gates 74LS32.
- **04:** Hex inverters 74LS04

Power supply

- **Bat:** Lithium battery +3V. Originally CR2430. I changed it when it died, the one shown here is a CR2025.
- **T1:** PNP transistor 3906.
- **T2:** NPN transistor 3904.

Connector

- Even leads on the top, odd leads on the other side.

For details, see my [Mini-memory page](#).

Revision 1. 8/26/01. OK to release.
