PRELIMINARY SERVICE CHECKS

This data provides the user with a time-saving service tool which is designed for quick isolation and repair of Computer system malfunctions.

Check all interconnecting cables for good connection and correct hook-up before making service checks.

Always turn the Computer Off before connecting or disconnecting connectors, boards or peripherals.

Disconnect all external peripherals from the Computer system to eliminate possible external malfunctions.

Replacement or repair of the Power Supply, System Board, Keyboard, Disk Drives or connectors may be necessary after the malfunction has been isolated.

TEST EQUIPMENT

Digital Volt/Ohm Meter
Logic Probe
Frequency Counter
Monitor with Audio Input
Disk Drive Tester or Test Program

TOOLS

Head Cleaning Equipment
Contact and Switch Cleaner (non-spray type)
Phillips Screwdriver
Flat Blade Screwdriver
1/4" Socket
IC Insertion and Removal Tools 20, 24 and 40
pin 14, 16, 28
Low Wattage Soldering Iron
Desoldering Equipment

Howard W. Sams & Co.

4300 West 62nd Street, P.O. Box 7092, Indianapolis, Indiana 46206 U.S.A.

The listing of any available replacement part herein does not constitute in any case a recommendation, warranty or guarantee by Howard W. Sams & Co. as to the quality and suitability of such replacement part. The numbers of these parts have been compiled from information furnished to Howard W. Sams & Co. by the manufacturers of the particular type of replacement part listed.

PRELIMINARY SERVICE CHECKS (Continued)

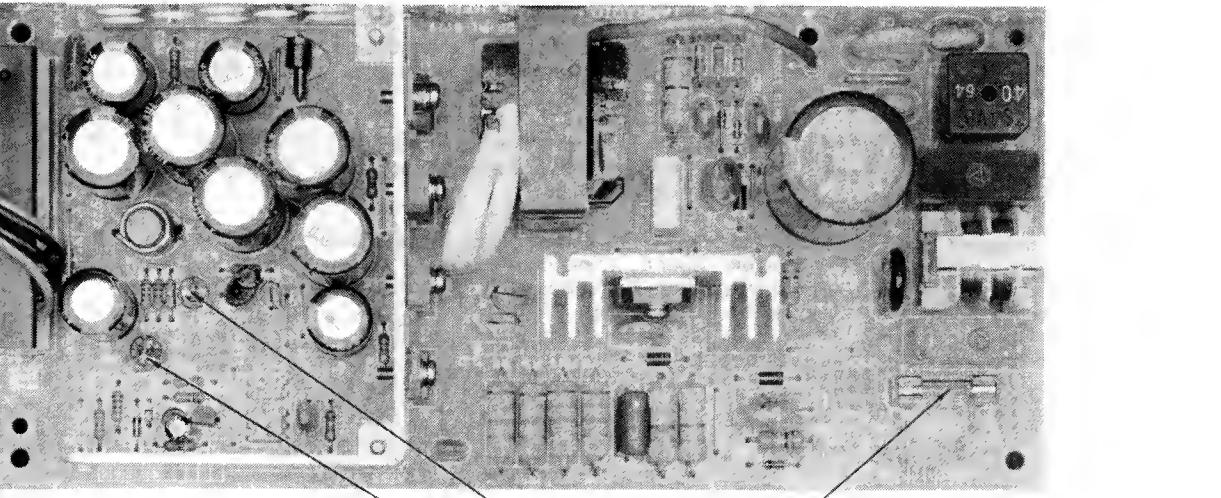

MISCELLANEOUS ADJUSTMENTS

POWER SUPPLY

NOTE: Do not operate the Power Supply without a load.

5V ADJUSTMENT

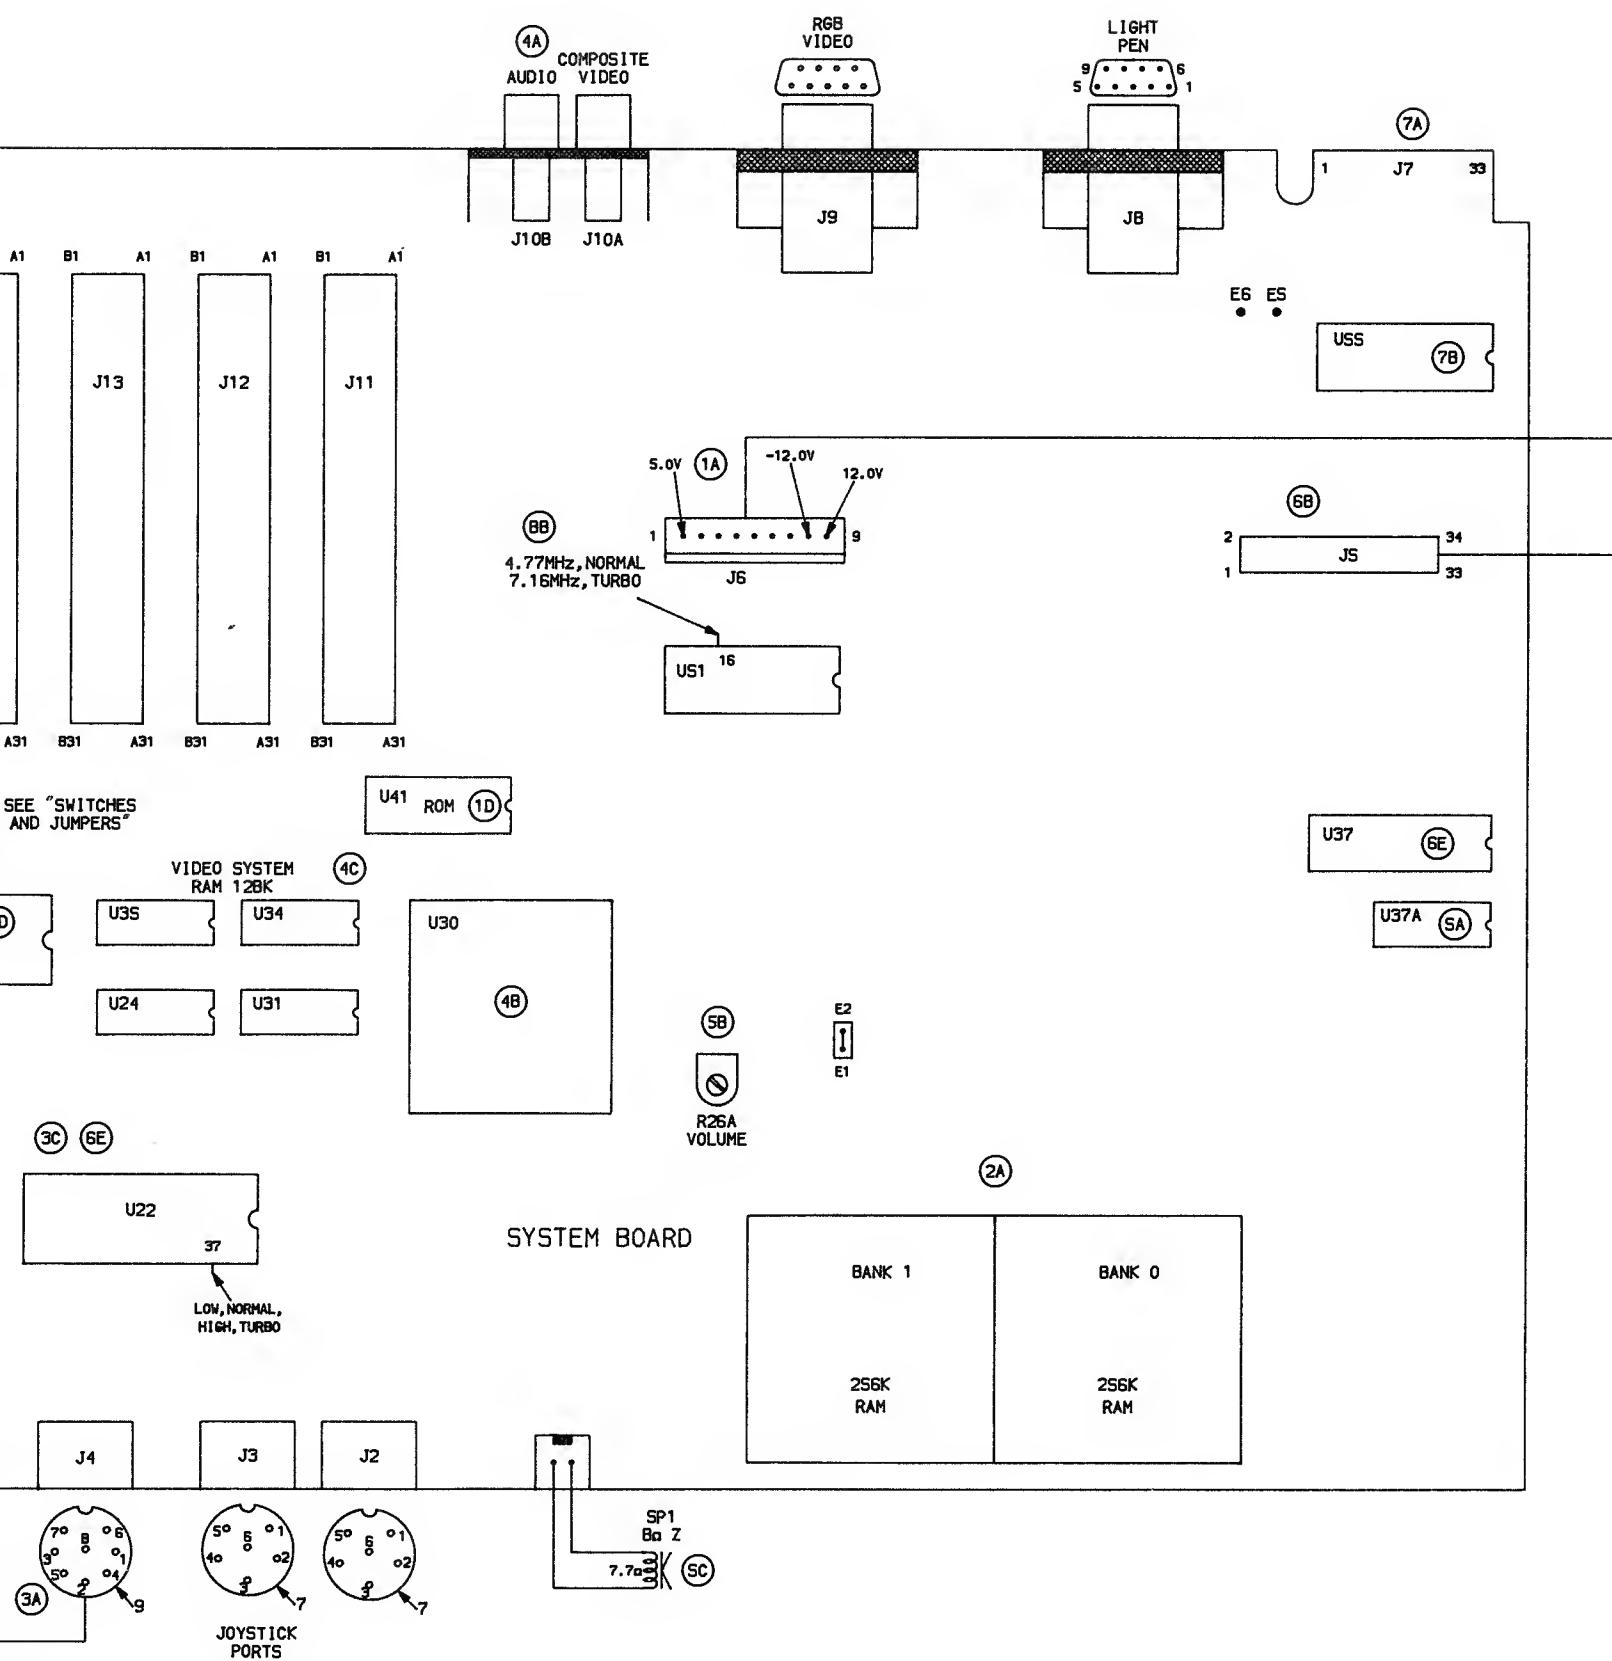

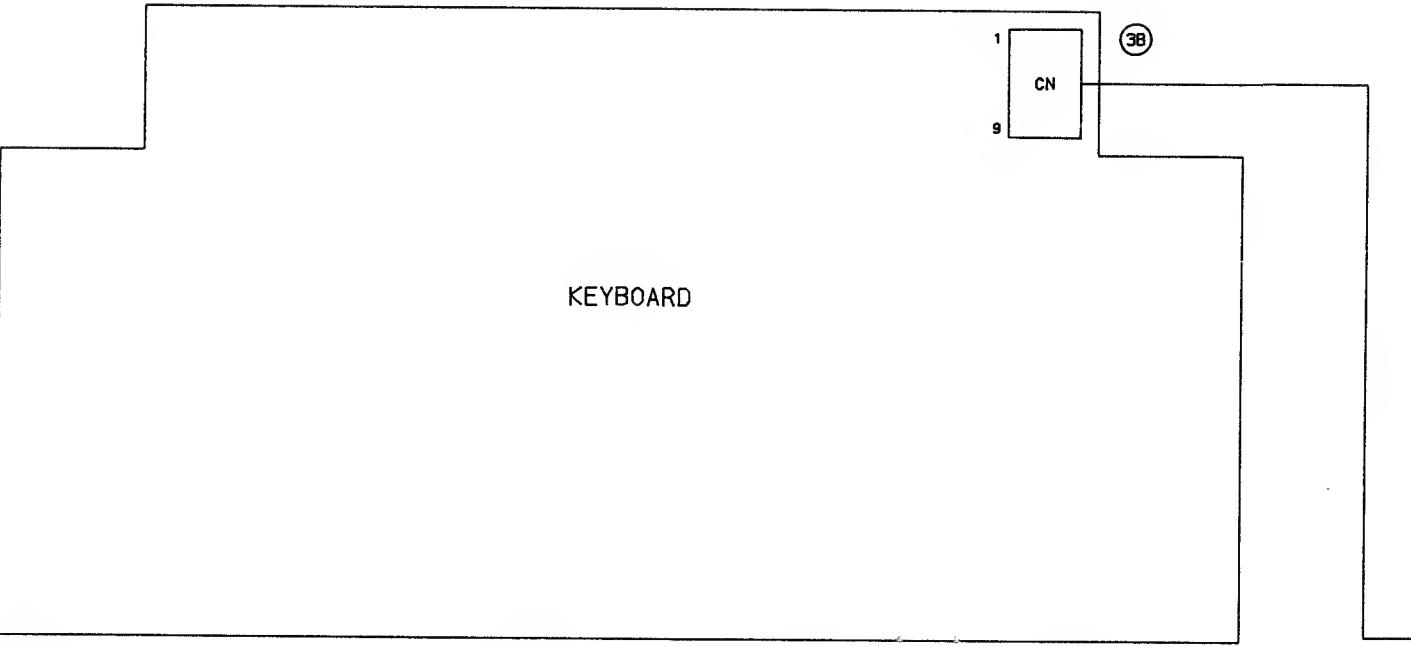

Connect the input of a voltmeter to pin 9 of Connector SK3-1. Adjust the 5V Adjust Control (VR1) for a voltage of 5.0V.

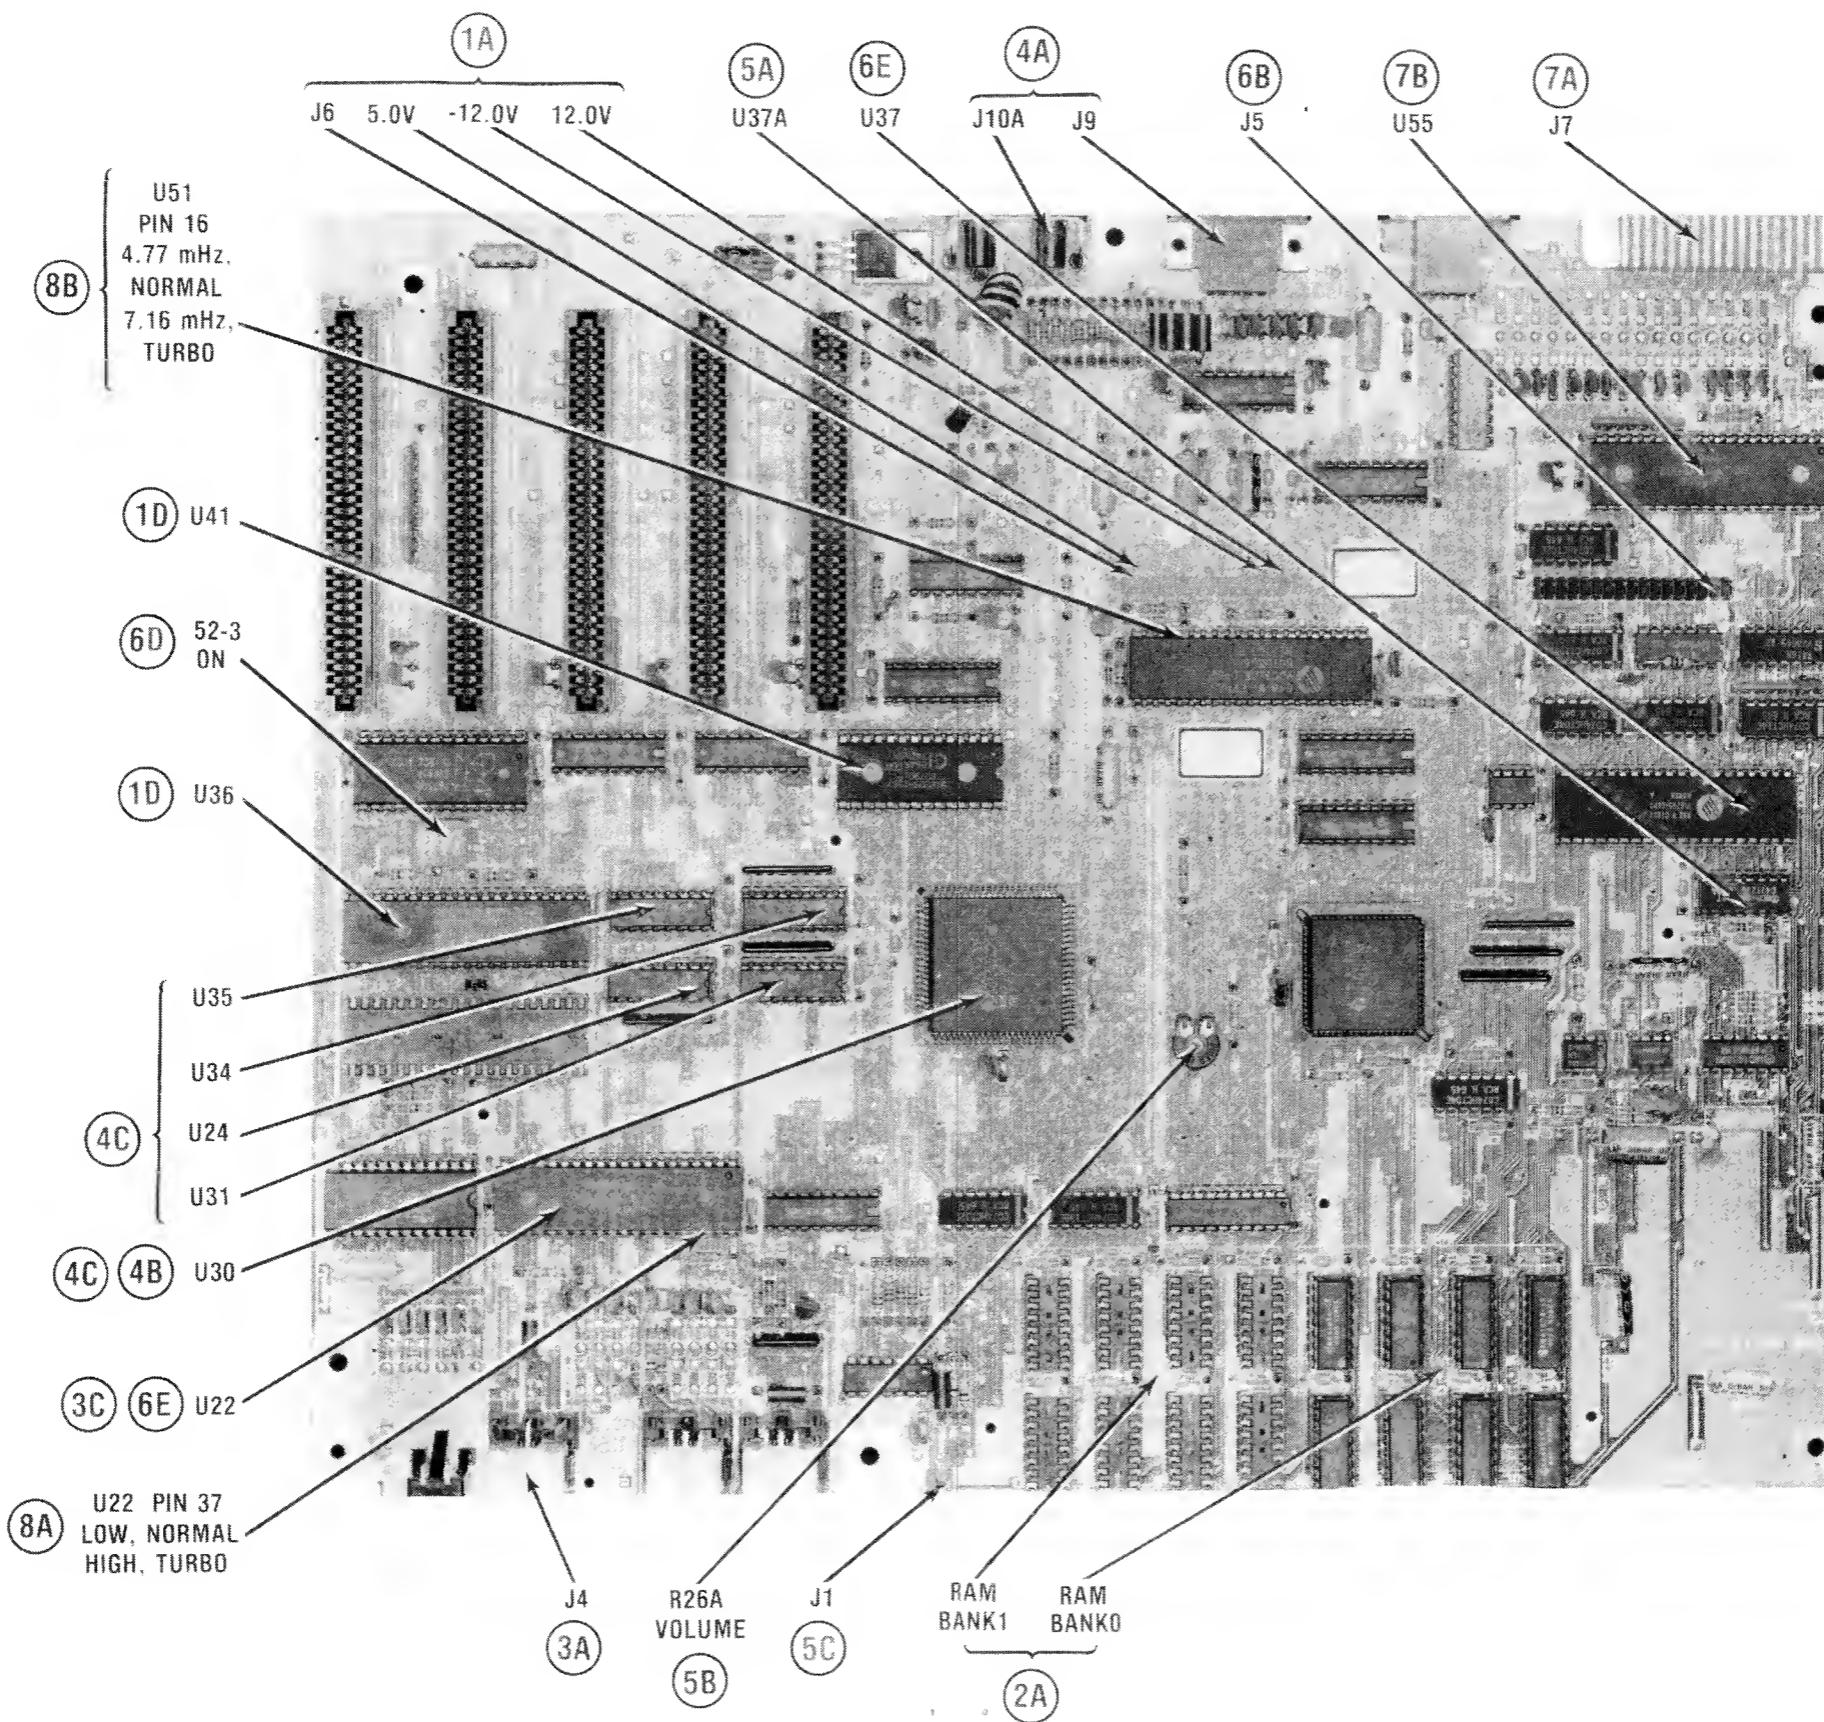

VR1
5V
ADJUST

VR2
12V
ADJUST

1B

PRELIMINARY SERVICE CHECKS (Continued)

PRELIMINARY SERVICE CHECKS (Continued)

SERVICE CHECKS

MATCH THE NUMBERS ON THE INTERCONNECTING DIAGRAM AND PHOTOS WITH THE NUMBERS ON THE SERVICE CHECKS TO BE PERFORMED.

- (1) COMPUTER DEAD
- (A) Check for 5.0V at pin 1, -12.0V at pin 8 and 12.0V at pin 9 of Connector J6 on the System Board. If the voltages are correct, go to part (D). If the voltages are not correct, check the adjustment of the 5V Adjust (VR1) and 12.0V Adjust (VR2) Controls on the Power Supply Board, see "Miscellaneous Adjustments."
- (B) If the voltages are missing at Connector J6, turn the Computer Off and disconnect the power connectors from the System Board and Disk Drive. Connect a #1129 lamp to the 5.0V Source (pin 1 of Connector J6) and a #93 lamp to the 12.0V Source (Pin 9 of Connector J6). WARNING: Operating the Power Supply without a load may damage it. Turn the Power Supply On and recheck the voltages. If the voltages are still missing, check Fuse F1.
- (C) If the correct voltages return, reconnect the Power Supply to the System Board and Disk Drives one at a time until the Board or Drive that is causing the Power Supply to shutdown is found. WARNING: Be sure Power supply is turned Off when connecting to the System Board or Disk Drive.
- (D) Check the CPU IC (U36) and ROM IC (U41) by substitution.
- (2) SYSTEM BOARD
- (A) A program runs for a while, then suddenly stops or becomes erratic in operation. Check RAM IC Banks 0 and 1 (IC's U1 thru U16).
- (3) KEYBOARD
- (A) Keyboard dead. Check Connector J4 on the System Board for good connections.
- (B) Check the Keyboard cable and check Connector CN on the Keyboard for good connections.
- (C) Check IC U22 on the System Board by substitution.
- (4) VIDEO
- (A) No video. Check Connectors J9 and J10A for good connections and check the Video cable going to the Monitor.
- (B) Check Video IC (U30) by substitution.
- (C) Video display is not correct. Check Video IC (U30) and Video RAM IC's (U24, U31, U34 and U35).
- (5) SOUND
- (A) No sound from the Internal Speaker (SP1) and no audio at Connector J10B. Check IC U37A by substitution.
- (B) No sound from the Internal Speaker (SP1). Check the setting of the Volume Control (R26A) on the System Board.
- (C) If Volume Control is set properly, check Connector J1 on System Board for good connections and check Speaker (SP1) voice coil for continuity.
- (6) DISK DRIVE
- (A) Disk Drive operation is erratic. Clean the Drive heads. Check the Drive Spindle Speed, see "Spindle Speed Check".
- (B) Check Connectors J1, J2, J4 thru J7 and J9 on the Disk Drive and Connector J5 on the System Board for good connections.
- (C) Drive dead. Check for 12V at pin 1 and 5V at pin 4 of Connector J2 on the Drive Board. If the voltages are missing, check the Power Supply.
- (D) If the voltages are present at Connector J2, check the setting of Switch S2-3 on the System Board. It should be set On.
- (E) If Switch S2-3 is set On, check IC's U22 and U37 on the System Board by substitution.
- (7) PARALLEL PORT
- (A) Parallel Port does not work. Check Connector J7 for good connections.
- (B) Check IC U55 by substitution.

PRELIMINARY SERVICE CHECKS (Continued)

(8)

NORMAL/TURBO CPU CLOCK

- (A) Run the following program to switch the CPU clock speed each time a key is pressed:

```
10 OUT 98,32:PRINT "NORMAL (4.77MHz)"  
20 AS=INKEYS:IF AS="" THEN 20  
30 OUT 98,40:PRINT "TURBO (7.16MHz)"  
40 AS=INKEYS:IF AS="" THEN 40 ELSE 10
```

Check for a logic Low at pin 37 of IC U22 with the speed set to "Normal" and logic High with the speed set to "Turbo". If the reading is not correct, check IC U22.

- (B) Check for a frequency of 4.77MHz at pin 16 of IC U51 with the speed set to "Normal" and 7.16MHz with the speed set to "Turbo". If the frequency does not switch, check IC U51.

DISASSEMBLY INSTRUCTIONS

CABINET REMOVAL

Remove two screws from lower front of cabinet. Slide cabinet forward and up to remove.

REAR PANEL REMOVAL

Remove three screws from lower rear of rear panel. Pull out on bottom of panel and lift up to clear tabs on top to remove panel.

DISK DRIVE REMOVAL

Slide metal shield out of slot on left side of Disk Drive bracket. Remove two screws from left front, two screws from left rear and one screw from right bottom of Disk Drive bracket. Slide the Drives forward and unplug four connectors from rear of Drives. Remove Drives from Main Chassis. Remove four screws from right side and two screws from left side of Disk Drive bracket to remove Drives from bracket.

POWER SUPPLY REMOVAL

Unplug Power Supply Connectors from System Board and Disk Drives. Remove rear panel. Remove four screws from rear holding Power Supply to chassis and lift Power Supply out of chassis.

SYSTEM BOARD REMOVAL

Remove Disk Drives and Power Supply. Remove four screws holding left side of chassis and remove left side. Disconnect Speaker plug from System Board. Remove plug-in boards from System Board. Remove four screws holding System Board to bottom of chassis and lift board out of chassis.

POWER SUPPLY DISASSEMBLY

Remove four screws holding Fan. Unplug and remove Fan. Grip end of chassis next to AC Power Connector, pull out to clear the tabs, disconnect Connector SK1 and remove the end of chassis with On-Off Switch and AC Connector. Remove four screws holding board to chassis and remove board.

KEYBOARD DISASSEMBLY

Remove nine screws from bottom of Keyboard cabinet and remove bottom of cabinet. Lift Keyboard out of cabinet top.

TANDY
MODEL 100SX

SWITCHES AND JUMPERS

SYSTEM BOARD

VIDEO AND INTERRUPT SWITCHES (S2)

	<u>ON</u>	<u>OFF</u>
S2-1 Video	Color Graphics Video (Internal or optional CGA Board)	Optional Monochrome Video Board
S2-2 Vertical Sync	Enable Interrupt 5	Disable Interrupt 5
S2-3 Floppy Disk Controller	Enable Interrupt 6	Disable Interrupt 6
S2-4 Parallel Port	Enable Interrupt 7	Disable Interrupt 7

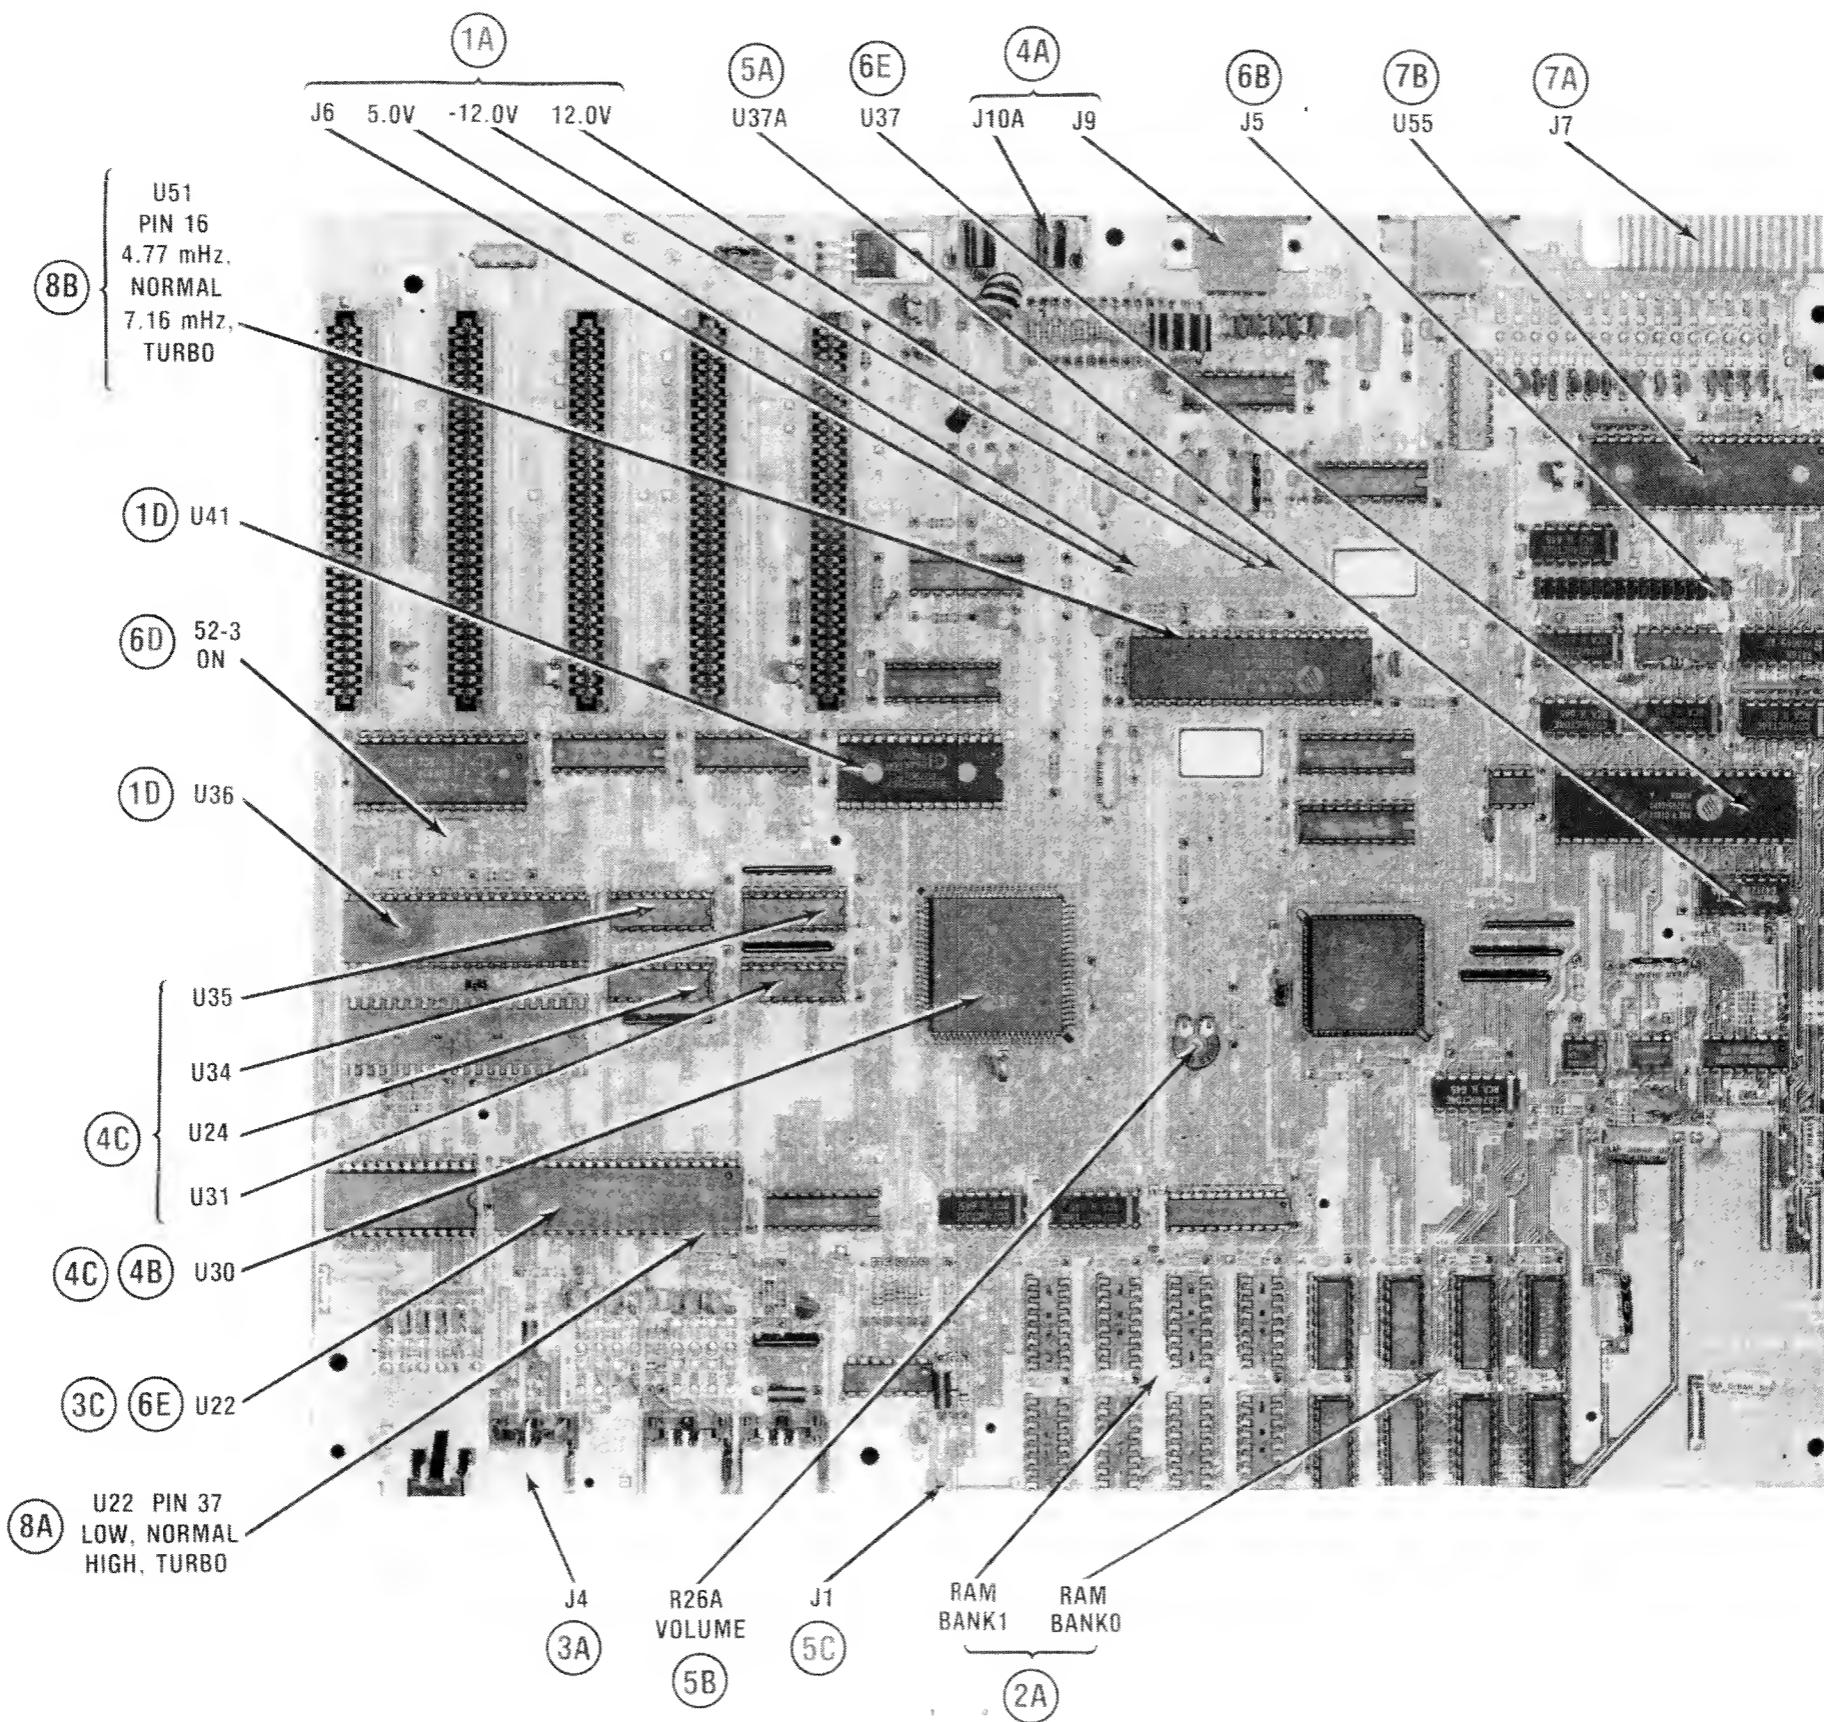

RAM JUMPER

Remove Jumper from pins E1 and E2 when installing additional 256K RAM IC's.
(U5 thru U8 and U13 thru U16.)

8047 MATH CO-PROCESSOR JUMPER

Remove jumper from pins E3 and E4 when installing on 8047 Math Co-Processor IC (U33).

PRELIMINARY SERVICE CHECKS (Continued)

PRELIMINARY SERVICE CHECKS (Continued)

PREVENTATIVE MAINTENANCE

ENVIRONMENT

Computers perform best in a clean, cool area that is below 80 degrees Fahrenheit and free of dust and smoke particles. Even though home Computers are not affected by cigarette smoke as much as commercial Computers are affected, it is better to maintain a smoke-free area around the Computer. Do not block cabinet vents of Computer, Monitor, Printer, or other power devices.

ELECTRICAL POWER

Variations in the line voltage can affect the Computer. Try to avoid these fluctuations by using an AC receptacle that is on a power line not used by appliances or other heavy current demand devices. A power-surge protector, power-line conditioner, or non-interruptable power supply may be needed to cure the problem. **Do not** switch power On and Off frequently.

KEYBOARD

Liquids spilled into the Keyboard can ruin it. Immediately after a spill occurs, disconnect the Computer power plug from AC power outlet. Then, if circuitry or contacts are contaminated, disassemble the Keyboard and carefully rinse the Keyboard printed circuit board with distilled water and let it dry. Use a cotton swab to clean between the keys. Use a non-abrasive contact cleaner and lint-free wipers on accessible connectors and contacts.

DISK DRIVES

Clean the read/write heads of the Disk Drives about once a month or after 100 hours usage. Use only an approved head cleaning kit.

Handle carefully to preserve proper disk head alignment. A sudden bump or jolt to the Disk Drives can knock the disk head out of alignment. If Disk Drive must be transported, place an old disk in slot and close door during transport.

Store disks in their protective covers and never touch the disk surface. Observe the disk handling precautions usually found on the back of disk protective covers.

PRINTERS

Carefully vacuum the Printer regularly. Wipe surface areas clean using a light all-purpose cleaner. Do not oil the machine. The oil will collect abrasive grit and dust. The dust will act as a blanket. This can cause components to overheat and fail.

STATIC ELECTRICITY

Static electricity discharge can affect the Computer. In order to minimize the possibility, use anti-static mats, sprays, tools and materials, and maintain good humidity in the Computer environment.

MONITOR

Use an isolation transformer with any Monitor that does not come as part of the system since some Monitors use a HOT chassis (chassis connected to one side of the AC line). The face of the Monitor should never be left on for long period of time at high brightness level except when pattern is being changed periodically. Use caution when cleaning anti-glare screens, to preserve the glare-reduction feature.

PRELIMINARY SERVICE CHECKS (Continued)

GENERAL OPERATING INSTRUCTIONS

BOOT UP

Insert a bootable diskette into Disk Drive A and turn On the Computer. The Computer will automatically boot up using the diskette in Disk Drive A. If a MS-DOS (MicroSoft Disk Operating System) diskette is used, the Computer will display the date and time and ask for a new date and time. After the date and time have been entered, the version of DOS will be displayed on the Monitor screen along with an A which indicates the DOS is running.

If Function Key F3 is pressed immediately after the Computer beeps when turned On, the Computer will boot up from a diskette inserted in Drive B.

MS-DOS

For a list of file names on the diskette in the current Disk Drive, type DIR and press the ENTER key. To specify Disk Drive that is not current (default), use DIR A: for Disk Drive A or DIR B: for Disk Drive B.

To return to MS-DOS from Basic, type SYSTEM and press the ENTER key.

To load a (System) program from a diskette while in DOS, type the program name and press the ENTER key.

A blank diskette must be formatted before it can be used to save information which is in memory. A formatted diskette must contain a DOS or a Start-up program before the Computer will boot up using that diskette.

Insert a diskette containing a "Format Program" into Disk Drive A. Type FORMAT and press the ENTER key. Follow the instructions on the Monitor screen to format the unformatted diskette. NOTE: Formatting a diskette will wipe out any programs previously placed on the diskette. The Computer automatically defaults to Disk Drive A if the destination Disk Drive is not specified. Be sure to specify the destination Disk Drive of the diskette to be formatted or the original diskette may be ruined by the default action.

BASIC

When turned On, the Computer will come up in MS-DOS as long as the MS-DOS diskette is in Drive A. The version of MS-DOS will appear at the top of the screen.

The manufacturer also supplies Disk Basic on diskette. To load Disk Basic, first boot up DOS. Insert a diskette with Disk Basic program on it. Type BASIC and press the RETURN

key or type BASIC A and press the RETURN key to load Disk Basic. To return to DOS from Basic, type SYSTEM and press the ENTER key.

To view a list and the names of programs on a diskette in the current Drive, type FILES and press the ENTER key. Type FILES "B: *.*" and press the ENTER key to list programs from Disk Drive B. Type FILES "A: *.*" to list programs from Disk Drive A if it is not the current (default) drive.

To load a program in Disk Basic or Advanced Disk Basic from the diskette, type LOAD, the program name enclosed in quotes, and press the Enter Key.

To save a program, type SAVE, the program name enclosed in quotes, and press the ENTER key.

To run a program from any Basic mode, type RUN and press the ENTER key. To stop a program, press the CTRL and BREAK (SCROLL LOCK) keys at the same time. NOTE: Some programs will disable or not recognize the CTRL and BREAK keys to prevent the user stopping the program while it is running.

RESETTING COMPUTER

Press the CTRL, ALT, and DEL keys, all three at the same time, to reset the Computer. The Computer can also be reset by pressing the Reset button on lower left front panel.

CHANGING OPERATING MODES

The Video, Disk Drive, and CPU speed modes can be changed by pressing Function Keys F1 thru F4 immediately after the Computer beeps when it is turned On. Use the following chart to determine the function of each Key:

F1 - Changes the Video mode to Monochrome mode. (Computer normally comes up in Color Graphics mode.)

F2 - Changes the Video mode to TV mode.

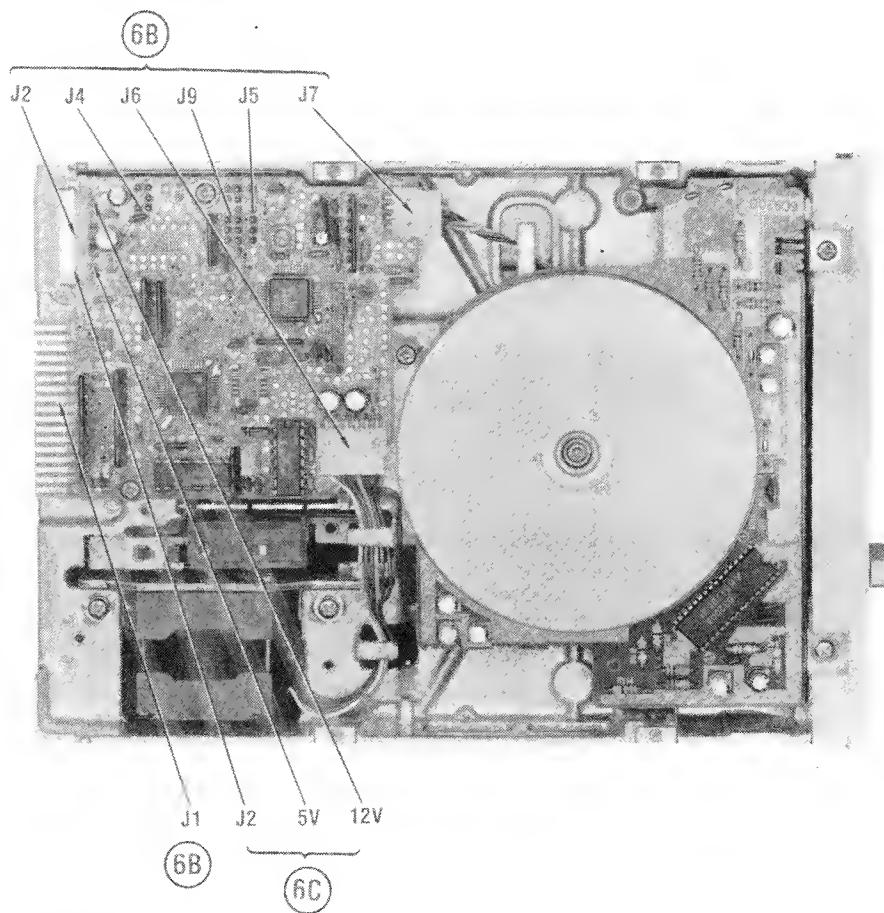

F3 - Swaps Disk Drive references. Drive A becomes Drive B and Drive B becomes Drive A. The Computer will boot up from the top Drive (normally Drive B).

F4 - Changes CPU speed to 4.77MHz. The Computer normally comes up with a CPU speed of 7.16MHz.

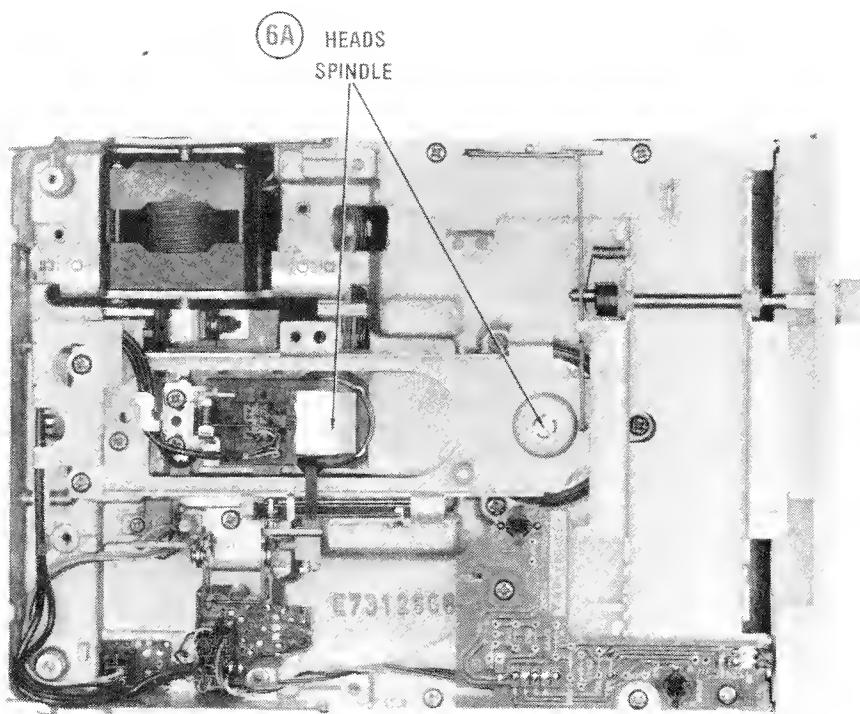

VOLUME CONTROL

A Volume Control (R26A) is provided on the Main System Board to set the volume of the internal speaker. The cabinet must be removed to gain access to the control.

CSCS19 **TANDY**
MODEL 1000SX

NOTE: ARROWS ON IC'S INDICATE PIN 1 UNLESS NOTED

GENERAL OPERATING INSTRUCTIONS

BOOT UP

Insert a bootable diskette into Disk Drive A and turn On the Computer. The Computer will automatically boot up using the diskette in Disk Drive A. If a MS-DOS (MicroSoft Disk Operating System) diskette is used, the Computer will display the date and time and ask for a new date and time. After the date and time have been entered, the version of DOS will be displayed on the Monitor screen along with an A which indicates the DOS is running.

If Function Key F3 is pressed immediately after the Computer beeps when turned On, the Computer will boot up from a diskette inserted in Drive B.

MS-DOS

For a list of file names on the diskette in the current Disk Drive, type DIR and press the ENTER key. To specify Disk Drive that is not current (default), use DIR A: for Disk Drive A or DIR B: for Disk Drive B.

To return to MS-DOS from Basic, type SYSTEM and press the ENTER key.

To load a (System) program from a diskette while in DOS, type the program name and press the ENTER key.

A blank diskette must be formatted before it can be used to save information which is in memory. A formatted diskette must contain a DOS or a Start-up program before the Computer will boot up using that diskette.

Insert a diskette containing a "Format Program" into Disk Drive A. Type FORMAT and press the ENTER key. Follow the instructions on the Monitor screen to format the unformatted diskette. NOTE: Formatting a diskette will wipe out any programs previously placed on the diskette. The Computer automatically defaults to Disk Drive A if the destination Disk Drive is not specified. Be sure to specify the destination Disk Drive of the diskette to be formatted or the original diskette may be ruined by the default action.

BASIC

When turned On, the Computer will come up in MS-DOS as long as the MS-DOS diskette is in Drive A. The version of MS-DOS will appear at the top of the screen.

The manufacturer also supplies Disk Basic on diskette. To load Disk Basic, first boot up DOS. Insert a diskette with Disk Basic program on it. Type BASIC and press the RETURN

key or type BASICA and press the RETURN key to load Disk Basic. To return to DOS from Basic, type SYSTEM and press the ENTER key.

To view a list and the names of programs on a diskette in the current Drive, type FILES and press the ENTER key. Type FILES "B: *.*" and press the ENTER key to list programs from Disk Drive B. Type FILES "A: *.*" to list programs from Disk Drive A if it is not the current (default) drive.

To load a program in Disk Basic or Advanced Disk Basic from the diskette, type LOAD, the program name enclosed in quotes, and press the Enter Key.

To save a program, type SAVE, the program name enclosed in quotes, and press the ENTER key.

To run a program from any Basic mode, type RUN and press the ENTER key. To stop a program, press the CTRL and BREAK (SCROLL LOCK) keys at the same time. NOTE: Some programs will disable or not recognize the CTRL and BREAK keys to prevent the user stopping the program while it is running.

RESETTING COMPUTER

Press the CTRL, ALT, and DEL keys, all three at the same time, to reset the Computer. The Computer can also be reset by pressing the Reset button on lower left front panel.

CHANGING OPERATING MODES

The Video, Disk Drive, and CPU speed modes can be changed by pressing Function Keys F1 thru F4 immediately after the Computer beeps when it is turned On. Use the following chart to determine the function of each Key:

F1 - Changes the Video mode to Monochrome mode. (Computer normally comes up in Color Graphics mode.)

F2 - Changes the Video mode to TV mode.

F3 - Swaps Disk Drive references. Drive A becomes Drive B and Drive B becomes Drive A. The Computer will boot up from the top Drive (normally Drive B).

F4 - Changes CPU speed to 4.77MHz. The Computer normally comes up with a CPU speed of 7.16MHz.

VOLUME CONTROL

A Volume Control (R26A) is provided on the Main System Board to set the volume of the internal speaker. The cabinet must be removed to gain access to the control.

CSCS19

TANDY
MODEL 100SX

DISASSEMBLY INSTRUCTIONS

CABINET REMOVAL

Remove two screws from lower front of cabinet. Slide cabinet forward and up to remove.

REAR PANEL REMOVAL

Remove three screws from lower rear of rear panel. Pull out on bottom of panel and lift up to clear tabs on top to remove panel.

DISK DRIVE REMOVAL

Slide metal shield out of slot on left side of Disk Drive bracket. Remove two screws from left front, two screws from left rear and one screw from right bottom of Disk Drive bracket. Slide the Drives forward and unplug four connectors from rear of Drives. Remove Drives from Main Chassis. Remove four screws from right side and two screws from left side of Disk Drive bracket to remove Drives from bracket.

POWER SUPPLY REMOVAL

Unplug Power Supply Connectors from System Board and Disk Drives. Remove rear panel. Remove four screws from rear holding Power Supply to chassis and lift Power Supply out of chassis.

SYSTEM BOARD REMOVAL

Remove Disk Drives and Power Supply. Remove four screws holding left side of chassis and remove left side. Disconnect Speaker plug from System Board. Remove plug-in boards from System Board. Remove four screws holding System Board to bottom of chassis and lift board out of chassis.

POWER SUPPLY DISASSEMBLY

Remove four screws holding Fan. Unplug and remove Fan. Grip end of chassis next to AC Power Connector, pull out to clear the tabs, disconnect Connector SK1 and remove the end of chassis with On-Off Switch and AC Connector. Remove four screws holding board to chassis and remove board.

KEYBOARD DISASSEMBLY

Remove nine screws from bottom of Keyboard cabinet and remove bottom of cabinet. Lift Keyboard out of cabinet top.

SAFETY PRECAUTIONS

1. Use an isolation transformer for servicing.
2. Maintain AC line voltage at rated input.
3. Remove AC power from the Computer system before servicing or installing electrostatically sensitive devices. Examples of typical ES devices are integrated circuits and semiconductor "chip" components.
4. Use extreme caution when handling the printed circuit boards. Some semiconductor devices can be damaged easily by static electricity. Drain off any electrostatic charge on your body by touching a known earth ground. Wear a commercially available discharging wrist strap device. This should be removed prior to applying power to the unit under test.
5. Use a grounded-tip, low voltage soldering iron.
6. Use an isolation (times 10) probe on scope.
7. Do not remove or install boards, floppy disk drives, printers, or other peripherals with Computer system AC power On.
8. Do not use freon-propelled sprays. These can generate electrical charges sufficient to damage semiconductor devices.
9. This Computer system is equipped with a grounded three-pronged AC plug. This plug must fit into a grounded AC power outlet. Do not defeat the AC plug safety feature.
10. Periodically examine the AC power cord for damaged or cracked insulation.
11. The Computer system cabinet is equipped with vents to prevent heat build-up. Never block, cover, or obstruct these vents.
12. Instructions should be given, especially to children, that objects should not be dropped or pushed into the vents of the cabinet. This could cause shock or equipment damage.
13. Never expose the Computer system to water. If exposed to water turn the unit Off. Do not place the Computer system near possible water sources.

TEST EQUIPMENT

Test Equipment listed by Manufacturer illustrates typical or equivalent equipment used by SAMS' Engineers to obtain measurements and is compatible with most types used by field service technicians.

TEST EQUIPMENT (COMPUTERFACTS)

Equipment	B & K Precision Equipment No.	Sencore Equipment No.	Notes
OSCILLOSCOPE	1570A,1590A,1596	SC61	
LOGIC PROBE	DP51,DP21		
LOGIC PULSER	DP101,DP31

CSCS19

TANDY
MODEL 1000SX

TROUBLESHOOTING

POWER SUPPLY

NOTE: Do not operate the Power Supply without a load. A #1129 lamp may be used as a load for the 5.0V Source and a #93 lamp used for the 12.0V Source. Use an Isolation Transformer with a stepdown control when servicing the Power Supply. Disconnect the Power Supply from the System Board and Disk Drives to avoid possible damage to the System from high voltages that may be produced while servicing Power Supply.

The Power Supply has a shutdown circuit, Zener Diode D11, Optoisolator PHC2 and Shutdown Transistor (Q3). The circuit will shut down the Power Supply if the 5.0V Source goes too high. To determine if the Power Supply is in shutdown, check for .67V at the base of Transistor Q3. The shutdown can be defeated by removing Zener Diode D11 from the circuit.

WARNING: Defeating shutdown may allow high voltages and currents to occur that may do further damage to Power Supply. Use a current limiting voltage stepdown AC Power Supply to supply AC power to the defective Power Supply when shutdown is defeated.

When shutdown occurs, the charge on Capacitor C9 will keep the Power Supply in shutdown if it is turned Off and immediately turned back On. Turn the Power Supply Off and wait at least two minutes before turning it back On to allow the charge on Capacitor C9 to discharge.

Power Supply Dead. Check Fuse F1. If F1 is open, check for possible shorts at Diode D1 and check for a possible shorted Power Amp Transistor (Q1). If Fuse F1 is good, apply AC power and check for 120V AC across the AC input pins of Diode D1. If 120V AC is missing, check Coils L1 and L3, Switch S1 and Connector SK1. If 120V AC is present, check for 163V at the collector of Transistor Q1. If 163V is missing, check Diode D1, Thermistor R1 and check the winding on Transformer T1 from pin 4 to pin 6 for continuity. If 163V is present, check the waveform at the base of Transistor Q1. If the waveform is missing, check the voltages and components associated with Oscillator Transistor (Q2) and Transistor Q1 and check the winding on Transformer T1 from pin 2 to pin 3 for continuity.

No -12.0V at pin 15 of Connector SK3-1. Check the winding on Transformer T1 from pin 8 to pin 9 for continuity and check the -12V Regulator IC (IC2), Diode D10, Capacitors C23, C24 and Resistor R25.

No 12.0V at pin 7 of Connector SK3-1. Check for 13.3V at the emitter of the 12V Regulator Transistor (Q4). If 13.3V is missing, check the winding on Transformer T1 from pin 13 to pin 14 for continuity and check Diode D8 and Capacitors C16 and C17. If 13.3V is present, check Error Amp IC (IC3), Transistor Q4, Capacitors C18, C25, Resistors R22 thru R26 and Control VR2.

TROUBLESHOOTING (Continued)

No 5.0V at pin 9 of Connector SK3-1. Check the winding on Transformer T1 from pin 11 to pin 13 for continuity and check Diode D9, Capacitors C19 thru C22 and Coil L2.

MICROPROCESSOR (CPU) OPERATION

Microprocessor IC (U36) not working. Check for a 7.159MHz waveform at pin 19 of IC U36. If the waveform is missing, refer to the "Oscillators and Dividers" section of this Troubleshooting guide. If the waveform checks good, check the logic reading at pin 21 (Reset) of IC U36 while turning the Computer On. The reading should be High when the Computer is turned On, then go Low. If the reading is not correct, check the logic reading at pin 21 of IC U51 while turning the Computer On. The reading should be High when the Computer is turned On, then go Low. If the reading is not correct, check Capacitors C134 and C135, Diode CR2, Reset Switch S1 and Resistor R38. If the reading is correct at pin 21 of IC U51, check IC U51.

OSCILLATORS AND DIVIDERS

Verify Oscillator Modules (Y1 and Y2) are working properly by checking for a 28.636MHz signal at pin 27 and 16.0MHz signal at pin 14 of IC U51. If the 28.636MHz signal is missing or frequency is not correct, check Oscillator Module Y1. If the 16.0MHz signal is missing or frequency is not correct, check Oscillator Module Y2.

If the Oscillator Modules check good, check the dividers in IC U51 by checking for a 1.193MHz signal at pin 3, 8.0MHz signal at pin 11, 14.318MHz signal at pin 12, 3.5795MHz signal at pin 13, 7.16MHz (4.77MHz in normal speed mode) signal at pin 16, 500KHz signal at pin 38 and 4.0MHz signal at pin 39 of IC U51. If any of the signals are not correct, check IC U51.

KEYBOARD

Keyboard does not function. Check Keyboard Connector J4 on the System Board and Connector CN on the Keyboard for good connections and check the Keyboard Cable for broken wires. If the Connectors and cable check good, check the waveforms at pins 1 and 4 of Connector J4 on the System Board while pressing the Space Bar on the Keyboard. If the waveforms check good, check IC U22 on the System Board. If the waveforms are missing, check the waveforms at pins 2, 21 thru 24 and 27 thru 34 of Keyboard Controller IC (M1) on the Keyboard. If the waveform is missing at pin 22, check the 6.0MHz Crystal (XL) and IC M1. If any of the other waveforms are missing, check IC M1. If the waveforms check good, check for pulses at pins 37 and 38 of IC M1 while pressing a key. If pulses are missing, check IC M1. If pulses are present, check IC M2.

No Sound. If there is no sound from the Internal speaker, check the setting of the Volume Control (R26A). The Control should be set to Maximum clockwise for Maximum volume.

If the Control is set properly, type in and run the following Basic program:

```
10 PRINT CHR$(7): GOTO 10
```

The program produces a continuous audio tone of about 1100 Hertz. While the program is running, check for pulses at pin 13 of IC U19. If pulses are missing, check IC U19. If pulses are present, check for pulses at pin 6 of IC U20. If pulses are missing, check IC U20. If pulses are present, check for pulses at pin 13 of IC U51. If pulses are missing, check IC U51. If pulses are present, check for the waveform shown in Figure A at pin 7 of IC U37A. If the waveform is missing, check IC U37A. If the waveform is present, check for a logic High at pins 26 and 27 and logic Low at pin 28 of IC U22. If any of the readings are not correct, check IC U22. If the readings are correct, check for a logic High at pin 2 of IC U47. If the reading is not correct, check IC U47. If the reading is correct, check for the waveform shown in Figure A at pins 9 and 10 of IC U25. If the waveform is missing

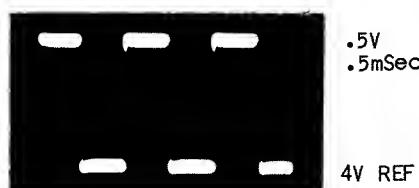

Figure A

at either pin, check IC U25. If the waveform is good at IC U25, check for the waveform shown in Figure B at pin 1 of IC U26. If the waveform is missing, check the voltages and components associated with IC U26. If the waveform checks good, check for the waveform shown in Figure C at pin 5 of IC U27 (with Volume Control R26A set at Maximum volume). If the waveform is missing, check the voltages and components associated with IC U27. If the waveform checks good, check Capacitor C130, Connector J1 and Speaker SP1.

Figure B

Figure C

NORMAL/TURBO CPU CLOCK

To check the CPU clock switching circuits, type in and run the following program:

```
10 OUT 98,32: PRINT "NORMAL (4.77MHz)"  
20 AS=INKEYS: IF AS="" THEN 20  
30 OUT 98,40: PRINT "TURBO (7.16MHz)"  
40 AS=INKEYS: IF AS="" THEN 40 ELSE 10
```

TROUBLESHOOTING (Continued)

The program changes the clock speed each time a key is pressed. Set the speed to "Normal" and check for a logic Low at pin 2 and a frequency of 4.77MHz at pin 16 of IC U51. Then set the speed to "Turbo" and check for a logic High at pin 2 and a frequency of 7.16MHz at pin 16 of IC U51. If the readings are not correct at pin 2, check IC U22. If the frequency does not switch at pin 16, check IC U51.

PARALLEL PORT

Parallel Port does not work. Check Connector J7 for good connections. If the connector checks good, disconnect any equipment connected to Connector J7 and type in and run the following Basic program:

```

10 CLS
20 LOCATE 1,1
30 OUT 888,0:OUT 890,0
40 PRINT"A=";INP(888)
50 PRINT"B=";(INP(889) AND 248)
60 PRINT"C=";INP(890)
70 OUT 888,255:OUT 890,255
80 PRINT"D=";INP(888)
90 PRINT"E=";(INP(889) AND 248)
100 PRINT"F=";INP(890)
110 GOTO 20

```

The program continuously checks the Parallel Port circuits and displays six numbers (A thru F) on the Monitor screen. With nothing connected to Connector J7, the following numbers should appear on the Monitor screen:

```

A=0
B=88
C=203
D=255
E=88
F=244

```

Make a parallel loopback test plug by connecting together pins 17, 19, 21, 23 and 28 of a 34-pin female edge connector. Connect the test plug to Connect J7 and run the above program. The following numbers should appear on the Monitor screen:

```

A=0
B=144
C=203
D=255
E=120
F=244

```

If any of the numbers are not correct, check for pulses at pin 15 of IC U19 while the above program is running. If pulses are missing, check IC U19. If pulses are present, check IC U55, Capacitors C152 thru C156 and C159 thru C168 and Resistor Packs RP11 and RP12.

JOYSTICK PORTS

Joystick Ports do not work. Type in and run the following Basic program:

```

10 CLS
20 LOCATE 2,2
30 OUT 512,255
40 PRINT INP(513)
50 GOTO 20

```

The program displays the number 240 on the Monitor screen when Joystick Connectors J2 or J3 are not being used. The number will change when pin 1 or 2 of Connector J2 or J3 is connected to 5.0V or when pin 4 or 6 of Connector J2 or J3 is connected to ground. Use the following charts to determine what the number will be.

Connected To 5.0V	Number	Connected To Ground	Number
J2-1	244	J2-4	176
J2-2	240	J2-6	112
J3-1	241	J3-4	224
J3-2	242	J3-6	208

If the numbers are not correct, make the following checks while the above program is running. Check for pulses at pin 12 of IC U19. If pulses are missing, check IC U19. If pulses are present, check for pulses at pin 8 of IC U20. If pulses are missing, check IC U20. If pulses are present, check for pulses at pin 10 of IC U53. If pulses are missing, check IC U53. If pulses are present, check for the waveform shown in Figure D at pin 4 of IC U17. If waveform is not correct, check Transistors Q1 and Q2, Zener Diode CR1, Capacitor C118 and Resistors R12, R13 and R14. If waveform is correct, connect pins 1 and 2 of

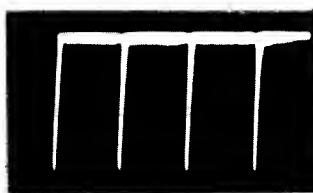

Figure D

CSCS19

TANDY
MODEL 1000SX

Connectors J2 and J3 to 5.0V and check for pulses at pins 1, 2, 13, and 14 of IC U17. If pulses are missing, check the voltages and components associated with IC U17. If pulses are present, check IC U21, Capacitors C104, C105, C108 and C109 and Resistor Packs RP1 and RP2.

USING A PRINTER FOR DISPLAY

If there is a defect in the CRT Controller Board, information that is normally displayed on the Monitor screen may not be visible or readable. In such cases, it may be possible to send the Monitor screen information to a Printer that is connected to the Computer. While the Computer is in MS-DOS or GWBasic, the Printer output can be turned On by pressing the Print Key. The Monitor screen information will continue to be printed out until the Print Key is pressed again to turn the Printer Off. It is also possible to get a printout of the entire screen display by holding the Shift Key down and pressing the Print Key.

Any Basic program that uses the PRINT command to send information to the Monitor screen can be made to send the information to a Printer by changing the PRINT command to LPRINT.

TROUBLESHOOTING (Continued)

VIDEO

No Video. Check waveforms at pins 2, 6, 8 and 11 of IC U57. If any waveforms are missing, check IC U30. If waveforms are good, check waveform at the base of Video Amp Transistor (Q3). If waveform is missing or not correct, check IC U57, Capacitor C58 and Resistors R57, R59, R61 and R62. If waveform is good, check waveform at the emitter of Transistor Q3. If waveform is missing, check the voltages and components associated with Transistor Q3.

VIDEO SYNC

No vertical or horizontal sync on an RGB Monitor. Check for a vertical waveform at pin 17 and a horizontal waveform at pin 15 of IC U57. If either waveform is missing, check IC U30. If waveforms are good, check IC U57, Capacitors C169 and C171 and check pins 8 and 9 of Connector J9 for good connections.

No vertical and horizontal sync on a Monitor connected to the Composite Video Jack (J10). Check composite sync waveform at pin 11 of IC U57. If waveform is missing, check IC U30. If waveform is present, check for sync pulses in waveform at the base of Video Amp Transistor (Q3). If pulses are missing, check IC U57 and Resistor R61. If sync pulses are present, check Transistor Q3, Capacitor C177, Resistor R66 and Jack J10.

VIDEO HIGHLIGHT

No Highlight. Type in and run the following Basic program:

```
10 DEF SEG=&HB00
20 FOR X=0 TO 4000 STEP 2
30 POKE X,42:POKE X+1,8
40 NEXT X
50 GOTO 50
```

The program fills the Monitor screen with highlighted characters. While the program is running, check for pulses at pins 4 and 16 of IC U57. If pulses are missing at pin 4, check IC U30. If pulses are present at pin 4 and missing at pin 16, check IC U57. If pulses are present at pin 16, check Resistors R58 and R54 and Capacitor C174.

COLOR

No color or some colors missing. Type in and run the following Basic program:

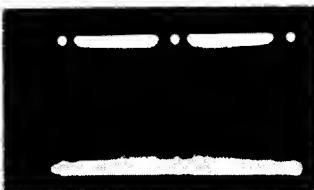

NOTE: Put four spaces between the quotes in line 70.

```
10 DATA 9, 10,12
20 SCREEN 0,1:WIDTH 80
30 KEY OFF:CLS
40 FOR Y=1 TO 3
50 READ C:COLOR 0,C
60 FOR X=1 TO 160
70 PRINT " ";
80 NEXT X:NEXT Y
90 GOTO 90
```

The program puts blue, green and red horizontal bars on the Monitor screen. While the program is running, check for the waveform shown in Figure E at pins 2, 6, 8, 12, 14 and 18 and the waveform shown in Figure F at pins 7 and 13 of IC U57.

5V
20uSec
0V REF

5V
20uSec
0V REF

Figure E

Figure F

If waveforms are missing at pin 2, 6, 8 or 13 of IC U57, check IC U30. If waveforms are present at pins 2, 6, 8 and 13 and missing at pins 7, 12, 14 and 18, check IC U57. If waveforms are good at pins 7, 12, 14 and 18, check Resistors R55 thru R58, R62 and R63, and Capacitors C58, C170, C172 and C173.

DISK DRIVE INTERFACE

WARNING: It is possible for a defective Disk Drive to write on or erase information on a diskette, even if the diskette is write protected. Check the Disk Drive by first using a diskette that has programs that have been backed up on another diskette. Do not leave the alignment diskette in the drive while checking voltages and waveforms unless specified in the alignment procedures. The test equipment may cause the Disk Drive circuits to erase sections of the alignment diskette even if the diskette is write protected.

Check all setup jumpers and switches for correct positions and check all interconnecting cables for good connections.

WILL NOT READ

Insert a diskette containing data in Disk Drive B and close the door. Type in and run the following Basic program to keep the Disk Drive running in read mode.

```
10 CLS
20 OUT 1014,128:OUT 1010,33:OUT 1010,37
30 OUT 1013,74:S=INP(1012)
40 OUT 1013,Y:S=INP(1012)
50 FOR X=1 TO 7
60 S=INP(1013):S=INP(1012):PRINT S
70 NEXT X:LOCATE 1,1
80 IF Y=1 THEN Y=5 ELSE Y=1
90 GOTO 20
```

To operate Drive A, change line 10 to OUT 1014,128:OUT 1010,16:OUT 1010,20.

The program displays seven numbers on the Monitor screen. The numbers should change when a diskette with data on it is inserted in the Drive and the Drive door closed while the above program is running.

TROUBLESHOOTING (Continued)

If the numbers do not change, make the following checks, while the program is running with a diskette in the Drive. Check for Index pulses at pin 17 of Floppy Disk Controller IC (U37). If pulses are missing, refer to the "Index Sensor" section of this Troubleshooting guide. If pulses are present, check for a logic Low at pin 1 and logic High at pin 2 of IC U48. If reading is not correct at pin 1, check IC U37. If reading is correct at pin 1 and not correct at pin 2, check IC U48. If readings are correct at IC U40, check for pulses at pins 11 and pin 30 of Connector J5 for good connections and check the Drive cable. If the connector and cable check good, refer to the "Disk Drive Troubleshooting" in the Disk Drive Folder.

If pulses are present at pin 11 of IC U45 and missing at pin 12, check IC U45. If pulses are present at pin 12, check for pulses at pins 4, 19 and 26 of IC U37. If pulses are missing at pins 4 or 19, check IC U51. If pulses are present at pins 4 and 19 and missing at pin 26, check IC U37. If pulses are present at pin 26, check for pulses at pin 10 of IC U47. If pulses are missing, check IC U47. If pulses are present, check for pulses at pins 2 and 7 of IC U38. If pulses are missing, check IC U38 and Capacitor C133. If pulses are present, check for pulses at pins 12 of IC U47. If pulses are missing, check IC U47. If pulses are present, check IC U37.

WILL NOT WRITE

Insert a blank diskette into the Disk Drive and close the door. Type in and run the following Basic program which writes continuously to the Diskette and displays a number on the upper left corner of the Monitor screen. The number should be 0 when the Diskette is not write protected and change to 2 when a write protected Diskette is inserted into the Drive. If the numbers are not correct, refer to the "Write Protect Does Not function" section of this Troubleshooting guide.

```
10 CLS
20 OUT 1014,128:OUT 1010,33:OUT 1010,37
30 S=INP(1012)
40 OUT 1013,77:S=INP(1012)
50 OUT 1013,Y:S=INP(1012)
60 OUT 1013,1:S=INP(1012)
70 OUT 1013,12:S=INP(1012)
80 OUT 1013,12:S=INP(1012)
90 OUT 1013,0:S=INP(1012)
100 S=INP(1013):S=INP(1012)
110 PRINT INP(1013) AND 2:S=INP(1012)
120 FOR X=1 TO 5
130 S=INP(1013):S=INP(1012)
140 NEXT X:LOCATE 1,1
150 IF Y=1 THEN Y=5 ELSE Y=1
160 GOTO 20
```

NOTE: This program will not write to the diskette if the diskette index sensor circuits are not working. Check for Index pulses at pin 11 of Buffer IC U4 while the Drive is running with a blank diskette inserted. If pulses are missing, refer to the "Index Sensor" section of this Troubleshooting guide.

While the above program is running, check for pulses at pins 4, 19, 25, 30, 31 and 32 of Floppy Disk Controller IC U37. If pulses are missing at pins 4 or 19, check IC U51. If pulses are present at pins 4 and 19 and missing at pins 25, 30, 31 or 32, check IC U37. If all readings are correct, check for pulses at pin 8 of IC U47. If pulses are missing, check IC U47. If pulses are present, check for pulses at pin 1 of IC U53. If pulses are missing, check IC U53. If pulses are present, check for pulses at pins 9 and 8 of IC U48. If pulses are missing at pin 9, check IC U50. If pulses are present at pin 9 and missing at pin 8, check IC U48. If pulses are present at pin 8, check pin 22 of Connector J5 for good connections and check the Drive cable. If the connector and cable check good, refer to the "Disk Drive Troubleshooting" in the Disk Drive Folder.

WRITE PROTECT DOES NOT FUNCTION

Type in and run the program listed under the "Will Not Write" section of this Troubleshooting guide. The program will display the number 0 on the left upper corner of the Monitor screen if a diskette that is not write protected is inserted into the Drive and the number 2 if the diskette is write protected.

WARNING: This program also writes on the diskette. Do not use a diskette that has data on it that is important. Insert a blank write protected diskette into the Drive and close the door.

If the numbers on the Monitor screen are not correct, make the following checks with a blank write protected diskette in the Drive and the program running.

Check for a logic Low at pin 3 and logic High at pin 4 of IC U45. If reading is not correct at pin 3, check pin 28 of Connector J5 for good connections and check the Drive cable. If the connector and cable check good, refer to the "Disk Drive Troubleshooting" in the Disk Drive Folder. If reading is correct at pin 3 of IC U45 and not correct at pin 4, check IC U45. If reading is correct at pin 4 and the number on the Monitor screen is not correct, check the Floppy Disk Controller IC (U37).

INDEX SENSOR

To check the Index Detector circuits, insert a diskette into Drive A and close the door. Type in and run the following Basic program to keep the drive running or make all checks when the Drive starts running after turning the Computer On.

```
10 OUT 1014,128:OUT 1010,20:GOTO 10
```

While the Drive is running, check for pulses at pins 5 and 6 of IC U45. If pulses are missing at pin 5, check pin 8 of Connector J5 for good connections and check the Drive cable. If pulses are present at pin 5 and missing at pin 6, check IC U45.

CSCS19

TANDY
MODEL 1000SX

TROUBLESHOOTING (Continued)

TRACK 00 SENSOR

Disk Drive Head bangs against the Track 00 stop. Type in and run the following Basic program to check the Track 00 detector circuits. The program will step the Head back to Track 00 and display the number 16 on the Monitor screen to indicate the head is on Track 00. If the head is manually pushed off Track 00, the number should change to the number 0.

DRIVE A

```
10 OUT 1014,128:OUT 1010,16:OUT 1010,20
20 OUT 1013,7:S=INP(1012)
30 OUT 1013,1:S=INP(1012)
40 FOR T=1 TO 500:NEXT T
50 OUT 1014,128:OUT 1010,16:OUT 1010,20
60 S=INP(1012)
70 OUT 1013,4:S=INP(1012)
80 OUT 1013,2:S=INP(1012)
90 CLS:PRINT INP(1013) AND 16:S=INP(1012)
100 GOTO 40
```

If the numbers are not correct on the Monitor screen, check (while program is running) for a logic Low at pin 9 of IC U45 when the head is On Track 00 and logic High when the head is Off Track 00. If readings are not correct, check pin 26 of Connector J5 for good connections and check the Drive cable. If readings are correct, check for a logic High at pin 8 of IC U45 with the head On Track 00 and logic Low with the head Off Track 00. If readings are not correct, check IC U45. If readings are correct, check for a logic High with momentary pulses at pin 39 of Floppy Disk Controller IC (U37). If reading is not correct, check IC U37. If reading is correct, check for a logic High with momentary pulses at pin 3 of IC U46 when the head is On Track 00 and logic Low when the head is Off Track 00. If readings are not correct, check IC U46. If readings are correct, check IC U37.

DRIVE SELECT AND DRIVE MOTOR

Drive A not being selected or Drive A and Drive B Motors do not turn On. Type in and run the following Basic program:

```
10 OUT 1014,128:OUT 1010,20:GOTO 10
```

While the program is running, check for a logic Low at pins 30 and 34 of Interface IC (U22) and pins 2 and 6 of IC U49. If readings are not correct at pins 30 or 34, check IC U22. If readings are correct at pins 30 and 34 and not correct at pins 2 or 6, check IC U49. If readings are all correct, check pins 10 and 16 of Connector J5 for good connections and check the Drive cable. If the connector and cable check good, refer to the "Disk Drive Troubleshooting" in the Disk Drive Folder.

Drive B not being selected. Type in and run the following Basic program:

```
10 OUT 1014,128:OUT 1010,37:GOTO 10
```

While the program is running, check for a logic Low at pin 3 and 4 of IC U49. If reading is not correct at pin 3, check IC U22. If

reading is correct at pin 3 and not correct at pin 4, check IC U49. If reading is correct at pin 4, check pin 12 of Connector J5 for good connections and check the Drive cable. If the connector and cable check good, refer to the "Disk Drive Troubleshooting" in the Disk Drive Folder.

HEAD POSITION MOTOR

Head position motor not working. Type in and run the following Basic program. The program continuously alternates the head on Drive B between tracks 00 and 16.

DRIVE B

```
10 OUT 1014,128:OUT 1010,33:OUT 1010,37
20 OUT 1013,7:S=INP(1012)
30 OUT 1013,1:S=INP(1012)
40 OUT T=1 TO 500:NEXT T
50 OUT 1010,37
60 OUT 1013,15:S=INP(1012)
70 OUT 1013,1:S=INP(1012)
80 OUT 1013,16:S=INP(1012)
90 FOR T=1 TO 500:NEXT T
100 GOTO 10
```

While the program is running, check for pulses at pins 37, 38 and 39 of Floppy Disk Controller IC (U37). If pulses are missing, check IC U37. If pulses are present, check for pulses at pin 11 of IC U46. If pulses are missing, check IC U46. If pulses are present, check for pulses at pin 4 and 6 of IC U48. If pulses are missing, check IC U48. If pulses are present, check pins 18 and 20 of Connector J5 for good connections and check the Drive cable. If the connector and cable check good, refer to the "Disk Drive Troubleshooting" in the Disk Drive Folder.

LINE DEFINITIONS

AA0 THRU AA7	Address	MOTOR ON	Disk Drive Motor On
AEN	Address Enable	MTREN	Motor Enable, Floppy Disk
ALE	Address Latch Enable	MTREN	Motor Enable, Floppy Disk
AUDIO	Audio Input Signal	MTRON	Motor On, Disk Drive
BBIOR	Input/Output Read	MWE0	Memory Write Enable, Bank 0
BBIOW	Input/Output Write	MWE1	Memory Write Enable, Bank 1
BREQ	Bus Request	NMI	Non-Maskable Interrupt
BRESET	Reset	NMIEN	Nonmaskable Interrupt Enable
BUFDIR	Buffer Data Direction	OSC	Oscillator
BUFENB	Buffer Enable	OSCOMA	Oscillator Timing 14MHZ
CAS	Column Address Strobe, Memory	PFAULT	Parallel Port Fault State
CLK	Clock Timing Pulses	PPACK	Parallel Port Acknowledge
CLK358	Clock	PPAUTOF	Parallel Port Automatic Feed
CLK8M	Clock	PPBUSY	Parallel Port Busy
COL/MNO	Color/Monochrome, Monitor Operating Mode	PPDATA0 THRU PPDATA7	Parallel Port Data Bits 0 Thru 7
CPUA08 THRU CPUA19	CPU Address Bits 08 Thru 19	PPI/TIM	Video Signal Timing
CPUAD0 THRU CPUAD7	CPU Data Bits 0 Thru 7	PPINIT	Parallel Port Initialize, Set Up Sequence
CPUCLK	CPU Clock	PPINT	Parallel Port Interrupt
D4CLK	Clock Pulse, 477MHZ	PPPAEM	Parallel Port Paper Empty Sensor
DACK1, DACK3	Direct Memory Access Acknowledge	PPSTROB	Parallel Port Timing Strobe
DEN	Data Enable	PRINTCS	Chip Select
DIR	Direction, Disk Read/Write Head	PSEL	Port Select
DMA/INTE	Direct Memory Access Request/Floppy Disk Controller Enable	QS0, QS1	Queue Status, Provide External Tracking
DMATC	Direct Memory Access Terminal Count	RAS	Row Address Strobe
DORCLK	Decode Latch Timing Signal	RDDATA	Read Data
DRQ, DRQ1, DRQ3	Direct Memory Access Request	RDYIN	Ready
DS	Disk Select	READ DATA	Read Data
DSA, DSB	Disk Drive Select A, B	READY	Ready, Current Bus Cycle Is To Be Completed
ENBNMI	Enable Non-Maskable Interrupt	REFRESH	Refresh Dynamic Memory Pulses
FAST	Clock Timing Select	RESET	Reset
FDCCHP	Floppy Disk Controller Chip Select	RFSH	Refresh Address For Dynamic Memory
FDCCLK	Floppy Disk Controller Clock	RQ/GT	Request/Grant, Bus Control
FDCCS	Floppy Disk Controller Chip Select	S0, S1, S2	Function Status Characteristics
FDCDACK	Floppy Disk Controller DMA Acknowledge	SELECT	Select Line Indicates On Line Status
FDCDMRQ	Floppy Disk Controller DMA Request	SIDE ONE	Floppy Disk Side One Select
FDCINT	Floppy Disk Controller Interrupt	SIDESEL	Floppy Disk Side Select
FDCRST	Floppy Disk Controller Reset	SNDCNTL0, 1, 2	Sound Control Lines 0, 1, 2
FDCTC	Floppy Disk Controller Terminal Count	SS0	Status, Used For Decoding Current Bus Cycle
FDCWCK	Floppy Disk Controller Timing Pulse	STEP	Stepper Motor
IA2 THRU IA7	Interrupt Request Lines 2 Thru 7	SYSRST	System Reset
INDEX	Index Sensor	TC	Terminal Count
INT	Interrupt	TMRINT	Timer Interrupt Request
INTA	Interrupt Acknowledge	TRACK 00	Disk, Track 00 Sensor
IOD0 THRU IOD7	Input/Output Data Bits 0 Thru 7	V28MHZ	Clock Pulse 28MHZ
IOR	Input/Output Read	VIDWAIT	Video System Wait Signal
IOW	Input/Output Write	VSYNC	Vertical Sync
JOYSTKS	Joy Sticks	WEN	Write Enable
KBDINT	Keyboard Interrupt	WR	Write, Data Bus Info Stored In Memory Or I/O
M/I/O	Select, Distinguishes Memory or I/O	WRDATA	Write Data
MEMIOS	Memory/Input-Output Select	WRITE DATA	Write Data
MEMR	Memory Read	WRITE GATE	Write Gate
MEMW	Memory Write	WRITE PROTECT	Disk Overwrite Protection Sensor
		WRPAT	Write Protect, Overwrite Protection

NOTE: ARROWS ON IC'S INDICATE PIN 1 UNLESS NOTED

SWITCHES AND JUMPERS

SYSTEM BOARD

VIDEO AND INTERRUPT SWITCHES (S2)

	<u>ON</u>	<u>OFF</u>
S2-1 Video	Color Graphics Video (Internal or optional CGA Board)	Optional Monochrome Video Board
S2-2 Vertical Sync	Enable Interrupt 5	Disable Interrupt 5
S2-3 Floppy Disk Controller	Enable Interrupt 6	Disable Interrupt 6
S2-4 Parallel Port	Enable Interrupt 7	Disable Interrupt 7

RAM JUMPER

Remove jumper from pins E1 and E2 when installing additional 256K RAM IC's.
(U5 thru U8 and U13 thru U16.)

8047 MATH CO-PROCESSOR JUMPER

Remove jumper from pins E3 and E4 when installing on 8047 Math Co-Processor
IC (U33).

MISCELLANEOUS ADJUSTMENTS

POWER SUPPLY

NOTE: Do not operate the Power Supply without a load.

5V ADJUSTMENT

Connect the input of a voltmeter to pin 9 of Connector SK3-1. Adjust the 5V Adjust Control (VR1) for a voltage of 5.0V.

12V ADJUSTMENT

NOTE: Perform the 5V Adjustment first. Connect the input of a voltmeter to pin 7 of Connector SK3-1. Adjust the 12V Adjust Control for a voltage of 12.0V.

SCHEMATIC NOTES

- ▽ Isolated ground.
- Circuitry not used in some versions
- Circuitry used in some versions
- ⊕ See parts list
- ± Ground
- *** Chassis

Logic readings, voltages and waveforms taken in Power Up mode. No diskettes in Disk Drives. No keys depressed. Version of compatibility software displayed on screen along with "Insert System Diskette and Strike any Key when ready". All switches on DIP Switch S2 set On.

Voltages measured with digital meter.

Waveforms and voltages taken from ground, unless noted otherwise.

Supply voltage maintained as shown at Input.

Controls adjusted for normal operation.

Capacitors are 50 volts or less, 5% unless noted.

Electrolytic capacitors are 50 volts or less, 20% unless noted.

Resistors are 1/2W or less, 5% unless noted.

Value in () used in some versions.

Measurements with switching as shown, unless noted.

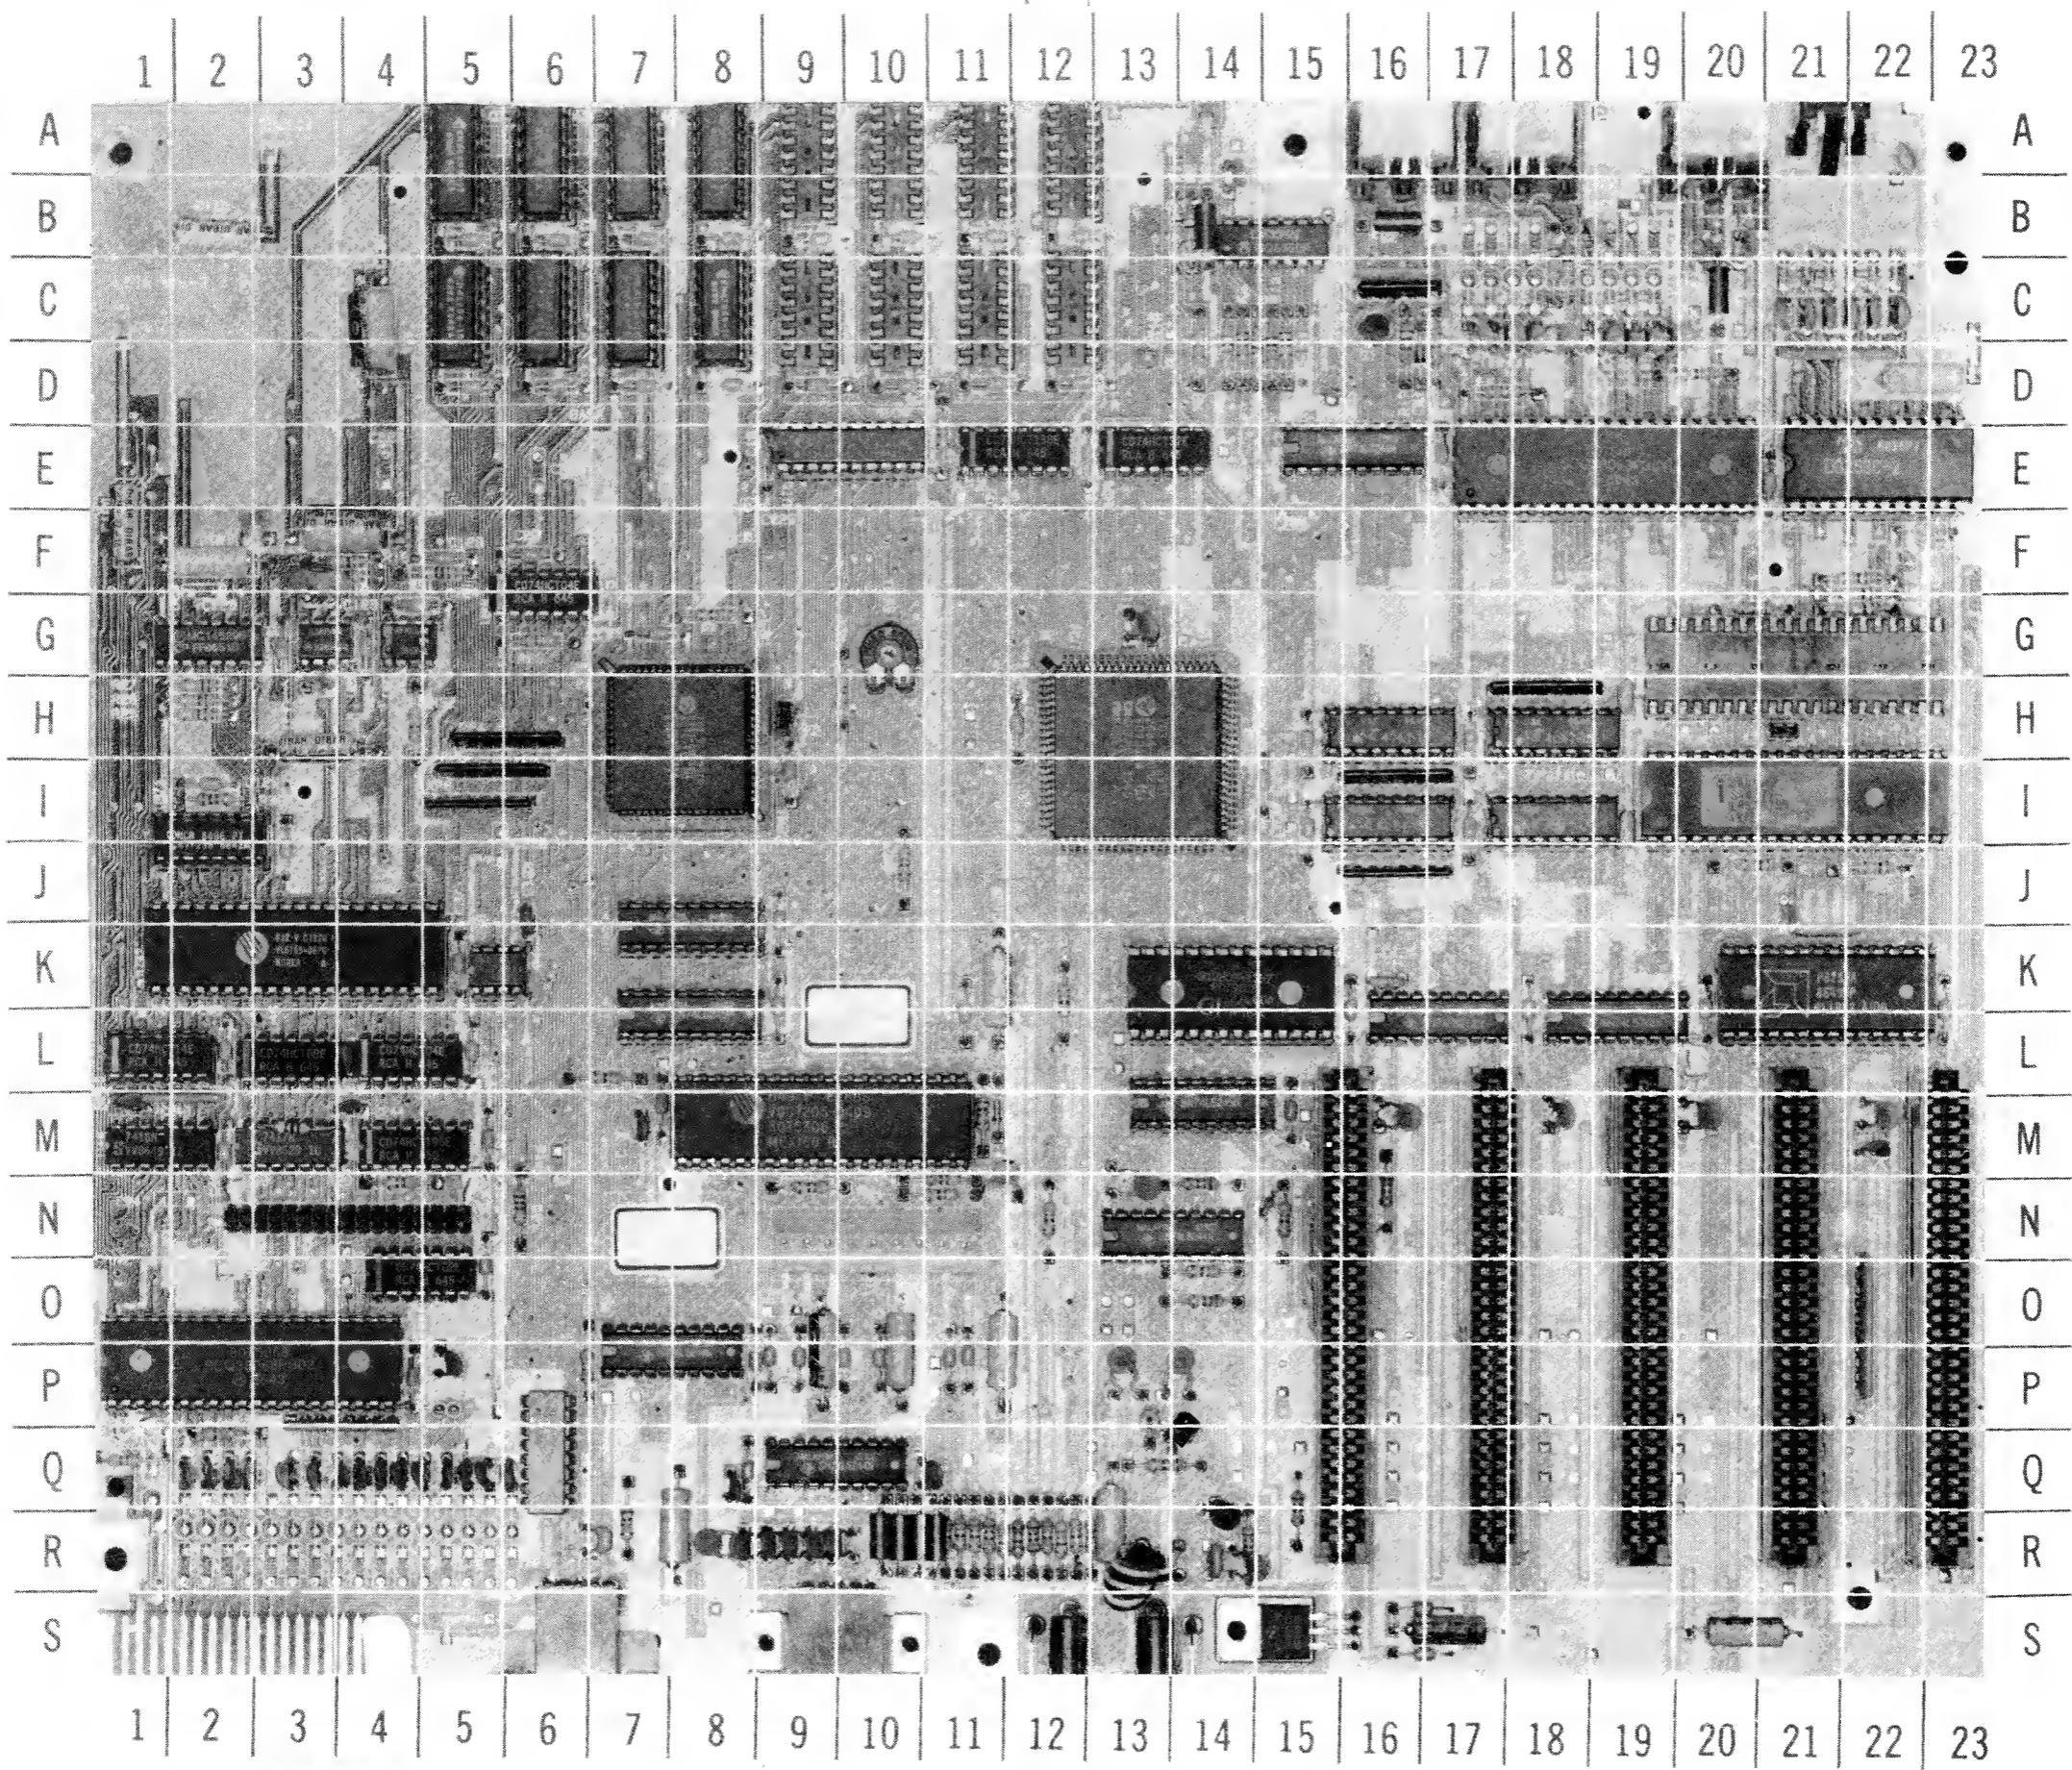

DISK DRIVE INTERFACE AND DISK DRIVE NOTES

Voltages, waveforms and logic readings for the disk drive interface and disk drive taken while running the following Basic program. Readings shown were taken when the disk drive head was not moving unless noted.

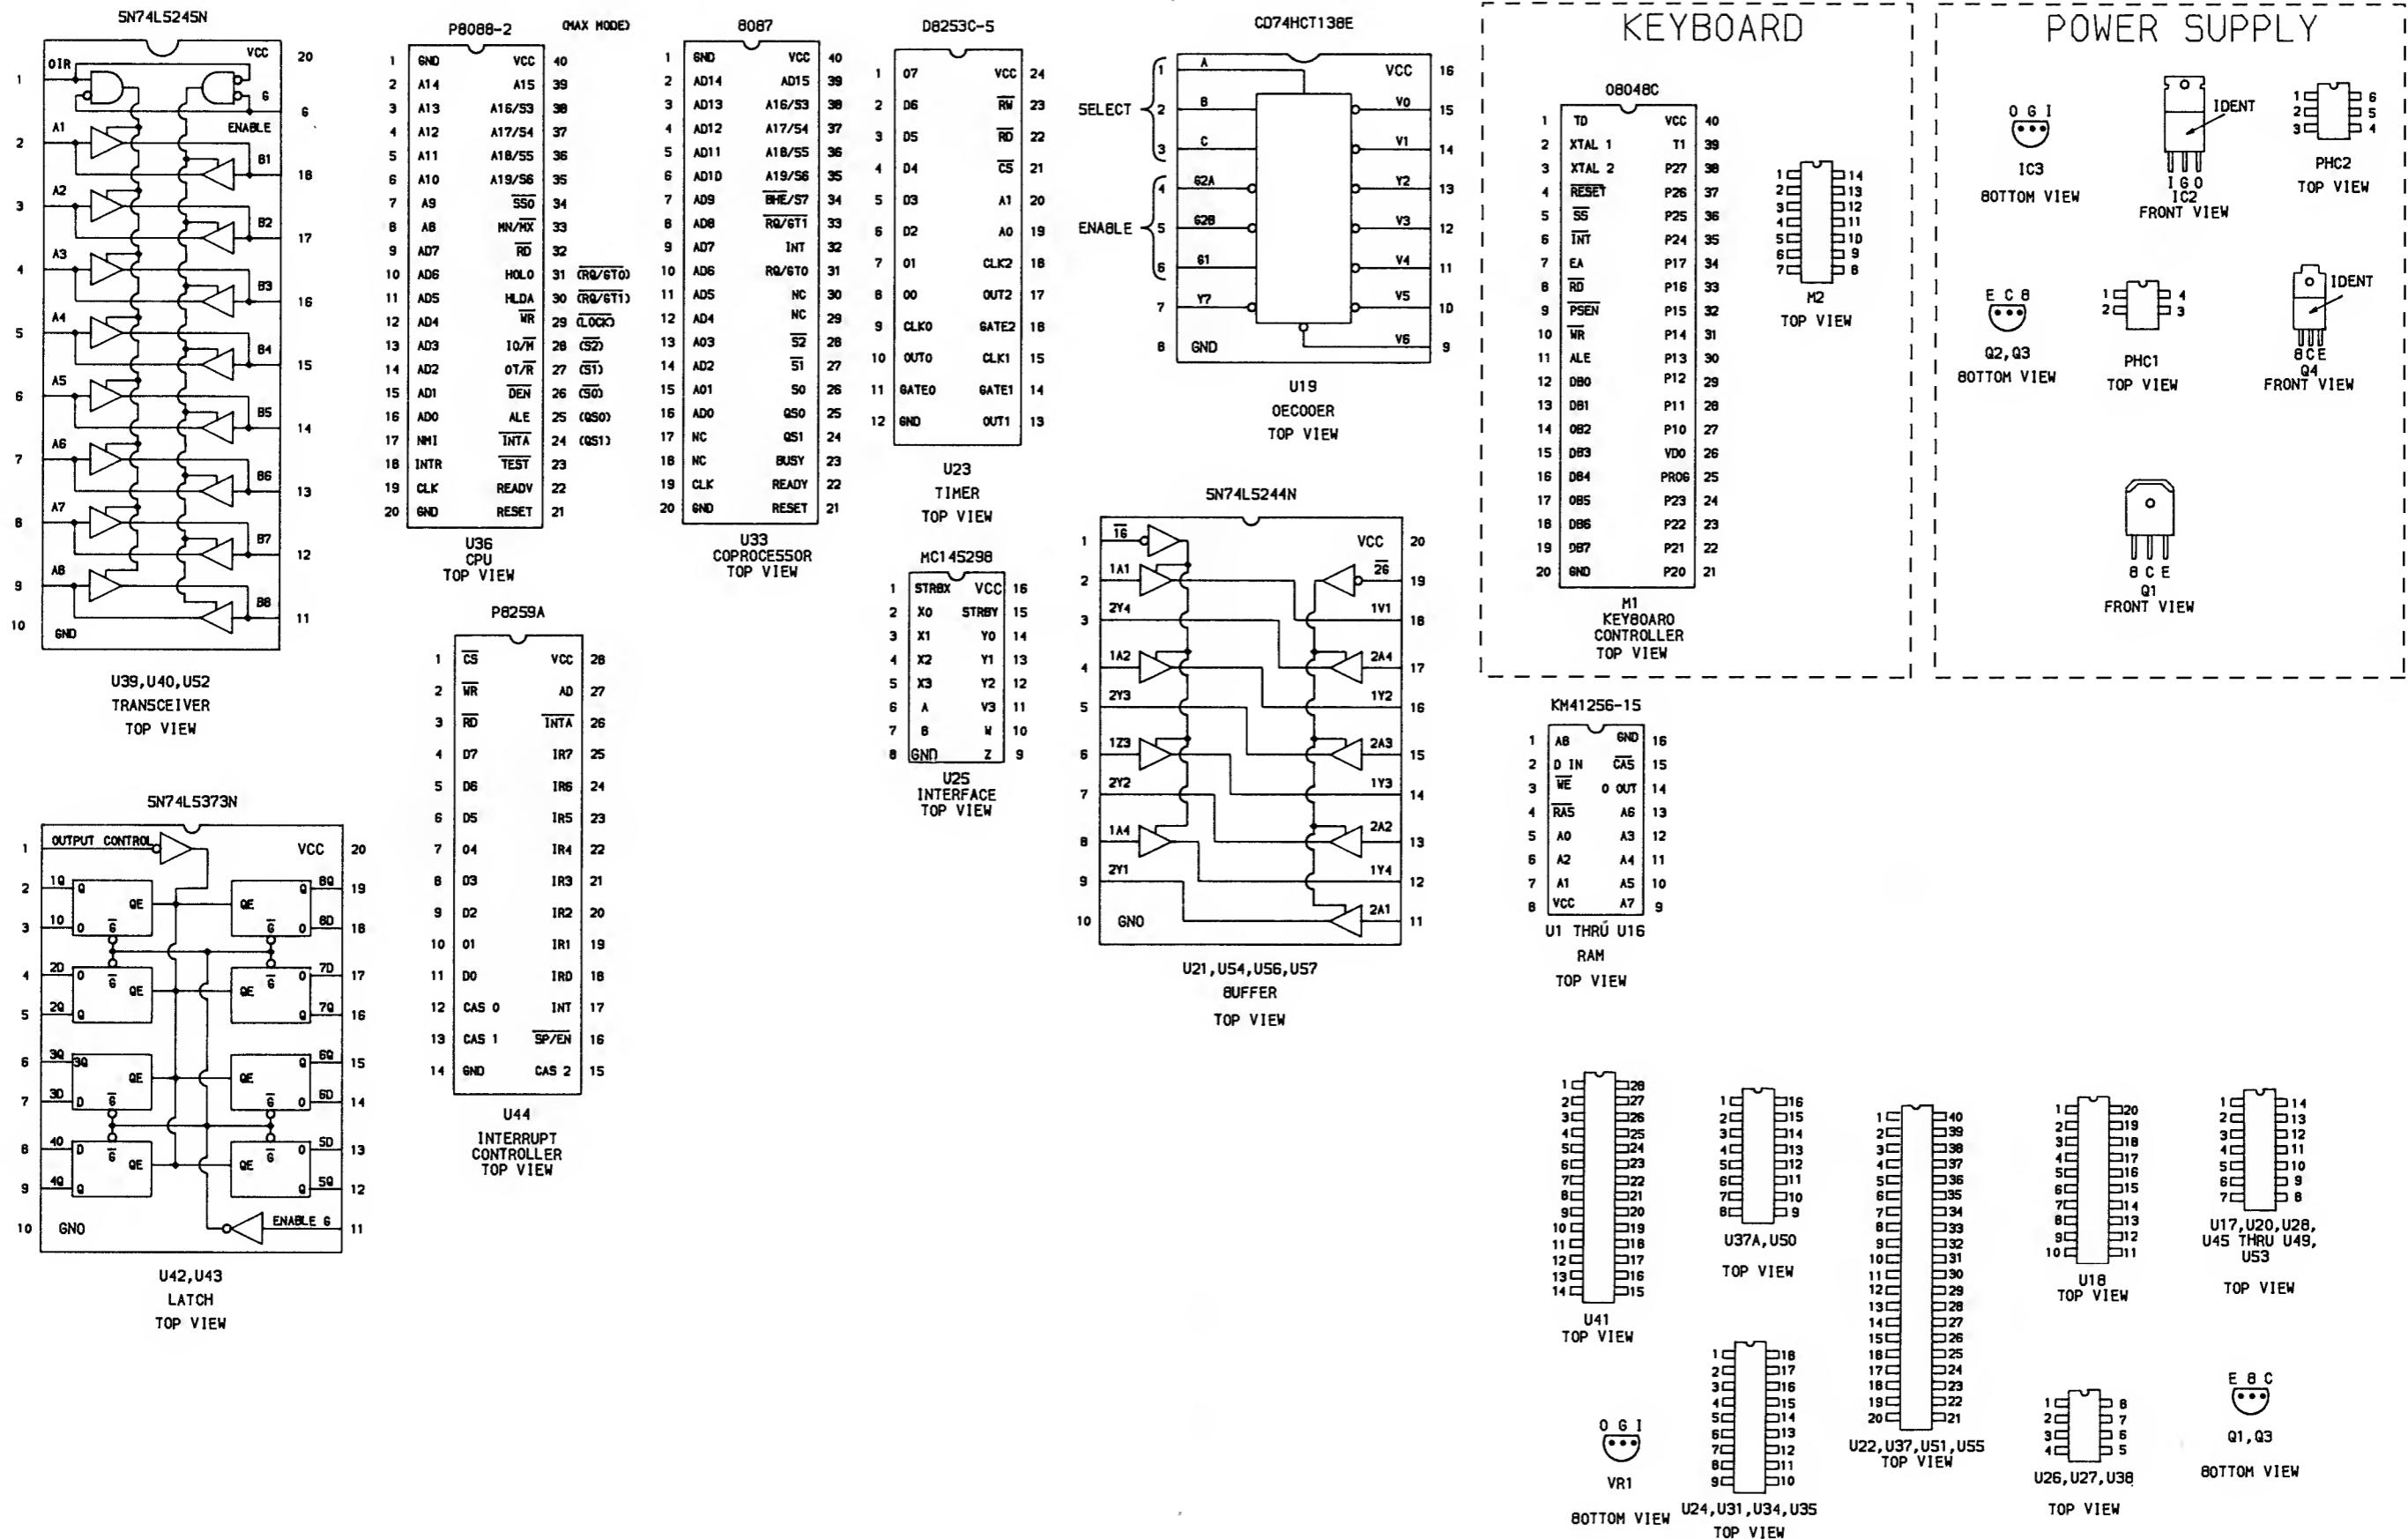

```
10 OPEN "B:SAMS.DAT" FOR OUTPUT AS #1
20 FOR X=1 TO 300
30 PRINT #1, "HOWARD W SAMS"
40 NEXT X
50 CLOSE #1
60 GOTO 10
```

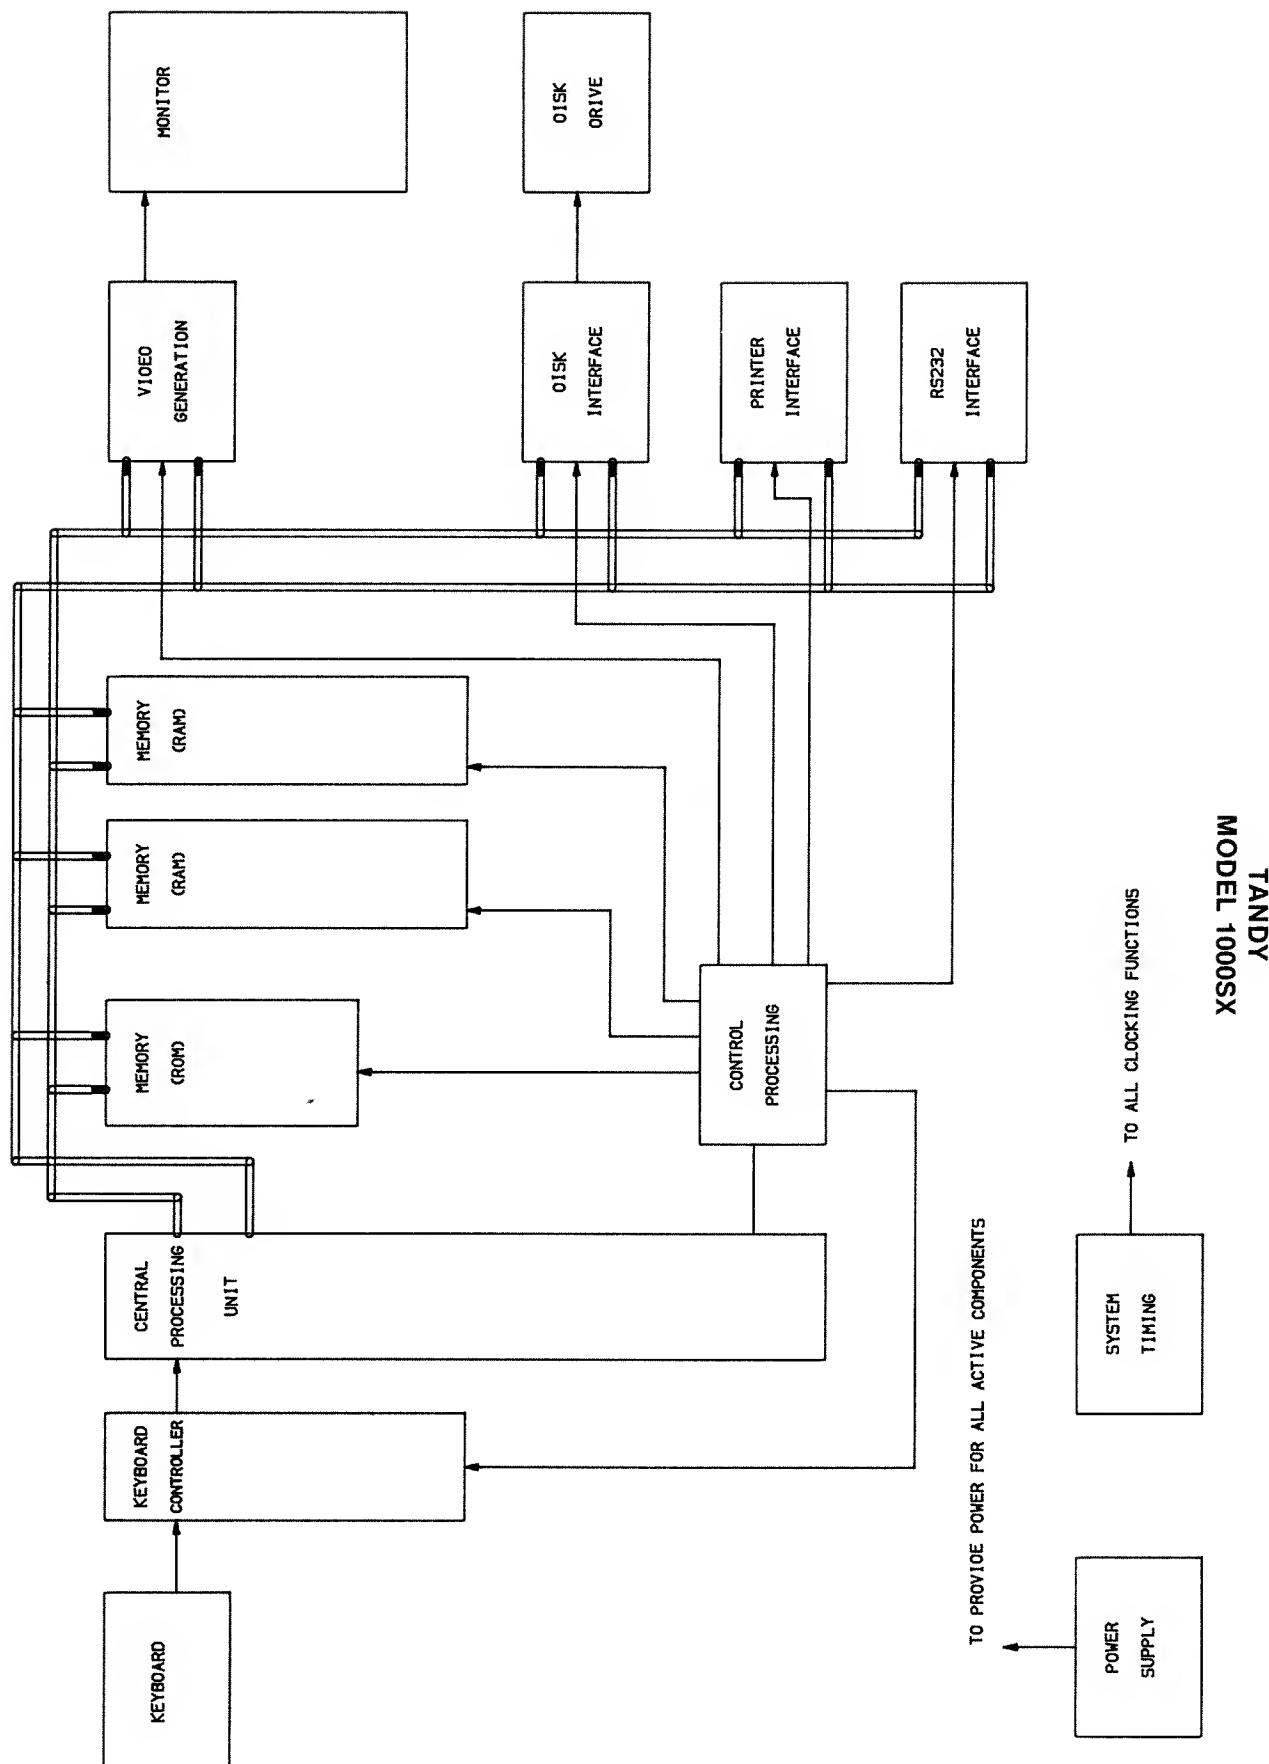

NOTE: Insert a formatted diskette (not write protected) in Drive B before running the program.

- (1) Probe indicates P when head is moving.
- (2) Probe indicates L when head 0 is selected, H when head 1 is selected.
- (3) Probe indicates H when head 0 is selected, L when head 1 is selected.
- (4) Probe indicates H when head is on track 00 and L when off track 00.
- (5) Probe indicates L when head is on track 00 and H when off track 00.
- (6) Probe indicates H when head is moving in and L when head is moving out from the center of the diskette.
- (7) Probe indicates L when head is moving in and H when head is moving out from the center of the diskette.
- (8) Probe indicates H when head is moving.
- (9) Probe indicates L when head is moving.
- (10) Probe indicates H when Drive Motor is off.

MODEL 1000SX

TROUBLESHOOTING

TEST SETUP

Connect a Disk Drive known to be operating properly to the Computer as Disk Drive A. Connect the defective Disk Drive as Disk Drive B. Use Disk Drive A to load any alignment or test program needed to check the defective Disk Drive.

WARNING: It is possible for a defective Disk Drive to write on or erase information on a diskette, even if the diskette is write protected. Check the Disk Drive by first using a diskette that has programs that have been backed up on another diskette. Do not leave the alignment diskette in the drive while checking voltages and waveforms unless specified in the alignment procedures. The test equipment may cause the Disk Drive circuits to erase sections of the alignment diskette even if the diskette is write protected.

Check all setup jumpers and switches for correct positions and check all interconnecting cables for good connections.

HEAD CLEANING INSTRUCTIONS

Use a cotton swab or lint-free cloth dampened with 91% Isopropyl alcohol and dry with a lint-free cloth or use a non-abrasive cleaning Diskette.

CONTINUOUS OPERATION OF DISK DRIVE

Use the following Basic program to keep Drive A running continuously in the read mode. Change the number 20 in the program to number 37 to make Drive B run continuously.

```
10 OUT 1014,128:OUT 1010,20:GOTO 10
```

OSCILLATOR

Verify the oscillator is working properly by checking the 480KHz waveform at pin 37 of Drive Controller IC (U3). If waveform is missing or the frequency not correct, check Crystal Y1, Capacitors C13 and C14, Resistor RAB from pin 4 to pin 5, and IC U3.

WILL NOT READ

Insert a diskette containing data in Disk Drive B and close the door. Type in and run the following Basic program to keep the Disk Drive running in read mode.

```
10 CLS
20 OUT 1014,128:OUT 1010,33:OUT 1010,37
30 S=INP(1012)
40 OUT 1013,74:S=INP(1012)
50 FOR X=1 TO 7
60 S=INP(1013):S=INP(1012):PRINT S
70 NEXT X:LOCATE 1,1
80 IF Y=1 THEN Y=5 ELSE Y=1
90 GOTO 20
```

To operate Drive A, change line 10 to OUT 1014,128:OUT 1010,16:OUT 1010,20.

The program displays seven numbers on the Monitor screen. The numbers should change when a

diskette with data on it is inserted in the Drive and the Drive door closed. While the above program is running, check for a logic High on the Write gate (pin 24) of Connector J1 on the Disk Drive Board to verify the Disk Drive is in read mode.

If reading is not correct, check the Disk Drive Interface circuit on the Computer System Board. If reading is correct, check for a logic Low at pin 10 of Drive Controller IC (U3). If reading is not correct, check IC U3. If reading is correct, check the waveform at pin 2 of Buffer IC (U4) while opening and closing the Drive door (with diskette in Drive). There should be a noticeable change in the waveform as the Drive door is opened and closed. If there is no change, check the head winding for continuity, check Connector J9 for good connections, and check the voltages and components associated with pins 1 thru 26 and 34 thru 44 of Read/Write Amp IC (U5). If the waveform checks good at pin 2 of IC U4, check for pulses at pin 3 of IC U4. If pulses are missing, check IC U4. If pulses are present, check the Drive cable and check the Disk Drive Interface circuit on the Computer System Board.

WILL NOT WRITE

Insert a blank diskette into the Disk Drive and close the door. Type in and run the following Basic program which writes continuously to the Diskette and displays a number on the upper left corner of the Monitor screen. The number should be 0 when the Diskette is not write protected and change to 2 when a write protected Diskette is inserted into the Drive. If the numbers are not correct, refer to the "Write Protect Does Not Function" section of this Troubleshooting guide.

```
10 CLS
20 OUT 1014,128:OUT 1010,33:OUT 1010,37
30 S=INP(1012)
40 OUT 1013,77:S=INP(1012)
50 OUT 1013,Y:S=INP(1012)
60 OUT 1013,1:S=INP(1012)
70 OUT 1013,12:S=INP(1012)
80 OUT 1013,12:S=INP(1012)
90 OUT 1013,0:S=INP(1012)
100 S=INP(1013):S=INP(1012)
110 PRINT INP(1013) AND 2:S=INP(1012)
120 FOR X=1 TO 5
130 S=INP(1013):S=INP(1012)
140 NEXT X:LOCATE 1,1
150 IF Y=1 THEN Y=5 ELSE Y=1
160 GOTO 20
```

NOTE: this program will not write to the diskette if the diskette index sensor circuits are not working. Check for index pulses at pin 11 of Buffer IC (U4) while the Drive is running with a blank diskette inserted. If pulses are missing, refer to the "Index Sensor" section of this Troubleshooting guide.

While the above program is running, check for pulses at pins 22 and 24 of Connector J1. If pulses are missing, check the Drive cable and check the Disk Drive Interface circuits on the

TROUBLESHOOTING (Continued)

Computer System Board. If pulses are present, check for pulses at pins 9 (TP2) and 10 of Drive Controller IC U3. If pulses are missing, check IC U3. If pulses are present, check the head windings for continuity, check Connector J9 for good connections, and check the voltages and components associated with pins 12 thru 27 of Read/Write Amp IC (U5).

WRITE PROTECT DOES NOT FUNCTION

Type in and run the program listed under the "Will Not Write" section of this Troubleshooting guide. The program will display the number 0 on the left upper corner of the Monitor screen if a diskette that is not write protected is inserted into the Drive and the number 2 if the diskette is write protected.

WARNING: This program also writes on the diskette. Do not use a diskette that has data on it that is important. Insert a blank write protected diskette into the Drive and close the door.

While the program is running, insert a write protected diskette into the Drive and check for a logic High at pin 5 of Connector J5. If reading is not correct, check Connector J5 for good connections and check the Write Protect Sensor (PQ52). If reading is correct, check for a logic High at pin 4 and logic Low at pin 5 of Buffer IC U4. If reading is not correct at pin 4, check Drive Controller IC (U3). If reading is correct at pin 4 and not correct at pin 5, check IC U4.

INDEX SENSOR

To check the Index Sensor circuits, type in and run the program given under "Continuous Operation of Disk Drive" to keep the drive running. Insert a diskette in the Disk Drive and close the door. Check for pulses at TP1 (pin 3 of Connector J5). If pulses are missing, check Connector J5 for good connections, Resistor RA7 from pin 2 to pin 1 and the Index Sensor (PQ51). If pulses are present, check for pulses at pin 12 of the Buffer IC (U4). If pulses are missing, check the Drive Controller IC (U3). If pulses are present, check for pulses at pin 11 of IC U4. If pulses are missing, check IC U4. If pulses are present, check pin 8 of Connector J1 for good connections.

TRACK 00 SENSOR

Disk Drive Head bangs against the Track 00 stop. Type in and run the following Basic program to check the Track 00 detector circuits. The program will step the Head back to Track 00 and display the number 16 on the Monitor screen to indicate the head is on Track 00. If the head is manually pushed off Track 00 the number should change to the number 0.

DRIVE A

```
10 OUT 1014,128:OUT 1010,16:OUT 1010,20
20 OUT 1013,7:S=INP(1012)
30 OUT 1013,1:S=INP(1012)
```

```
40 FOR T=1 TO 500:NEXT T
50 OUT 1014,128:OUT 1010,16:OUT 1010,20
60 S=INP(1012)
70 OUT 1013,4:S=INP(1012)
80 OUT 1013,2:S=INP(1012)
90 CLS:PRINT INP(1013) AND 16:S=INP(1012)
100 GOTO 40
```

DRIVE B

```
10 OUT 1014,128:OUT 1010,33:OUT 1010,37
20 OUT 1013,7:S=INP(1012)
30 OUT 1013,1:S=INP(1012)
40 T=1 TO 500:NEXT T
50 OUT 1014,128:OUT 1010,33:OUT 1010,37
60 S=INP(1012)
70 OUT 1013,4:S=INP(1012)
80 OUT 1013,2:S=INP(1012)
90 CLS:PRINT INP(1013) AND 16:S=INP(1012)
100 GOTO 40
```

If the number on the Monitor screen is not correct, check for a logic High at TP3 when the head is On Track 00 and a logic Low when the head is Off Track 00. If readings are not correct, check Connector J4 for good connections, check the Track 00 Sensor (M2) and Resistor RA7 from pin 5 to pin 1. If readings are correct, check for a logic High at pin 14 and a logic Low at pin 13 of Buffer IC (U4) with the head On Track 00 and a logic Low at pin 14 and a logic High at pin 13 with the head Off Track 00. If readings are not correct at pin 14, check Drive Controller IC (U3). If readings are correct at pin 14 and not correct at pin 13, check IC U4.

DRIVE MOTOR

Drive Motor will not run. Check Connectors J1 and J7 on the Disk Drive Board for good connections. Check for 5.0V at pin 4 and 12.0V at pin 1 of Connector J2 on the Disk Drive Board. If the voltages are missing, check the power supply.

Type in and run the program given under "Continuous Operation of Disk Drive" to keep the Drive running. Check for a logic Low at pin 16 of Connector J1 on the Disk Drive Board. If reading is not correct, check the Drive cable and check the Disk Drive Interface on the Computer System Board. If reading is correct, check for a logic High at pin 3 of Connector J7. If reading is not correct, check the Drive Controller IC (U3). If reading is correct, check Connector J7 for good connections and check the Drive Motor Control Board.

STEPPING MOTOR

Head position motor not working. Type in and run the following Basic program. The program continuously alternates the head on Drive B between Tracks 00 and 16.

DRIVE A

```
10 OUT 1014,128:OUT 1010,16:OUT 1010,20
20 OUT 1013,7:S=INP(1012)
30 OUT 1013,1:S=INP(1012)
40 OUT T=1 TO 500:NEXT T
```

TROUBLESHOOTING (Continued)

```
50 OUT 1010,20
60 OUT 1013,15:S=INP(1012)
70 OUT 1013,1:S=INP(1012)
80 OUT 1013,16:S=INP(1012)
90 FOR T=1 TO 500:NEXT T
100 GOTO 10
```

DRIVE B

```
10 OUT 1014,128:OUT 1010,33:OUT 1010,37
20 OUT 1013,7:S=INP(1012)
30 OUT 1013,1:S=INP(1012)
40 OUT T=1 TO 500:NEXT T
50 OUT 1010,37
60 OUT 1013,15:S=INP(1012)
70 OUT 1013,1:S=INP(1012)
80 OUT 1013,16:S=INP(1012)
90 FOR T=1 TO 500:NEXT T
100 GOTO 10
```

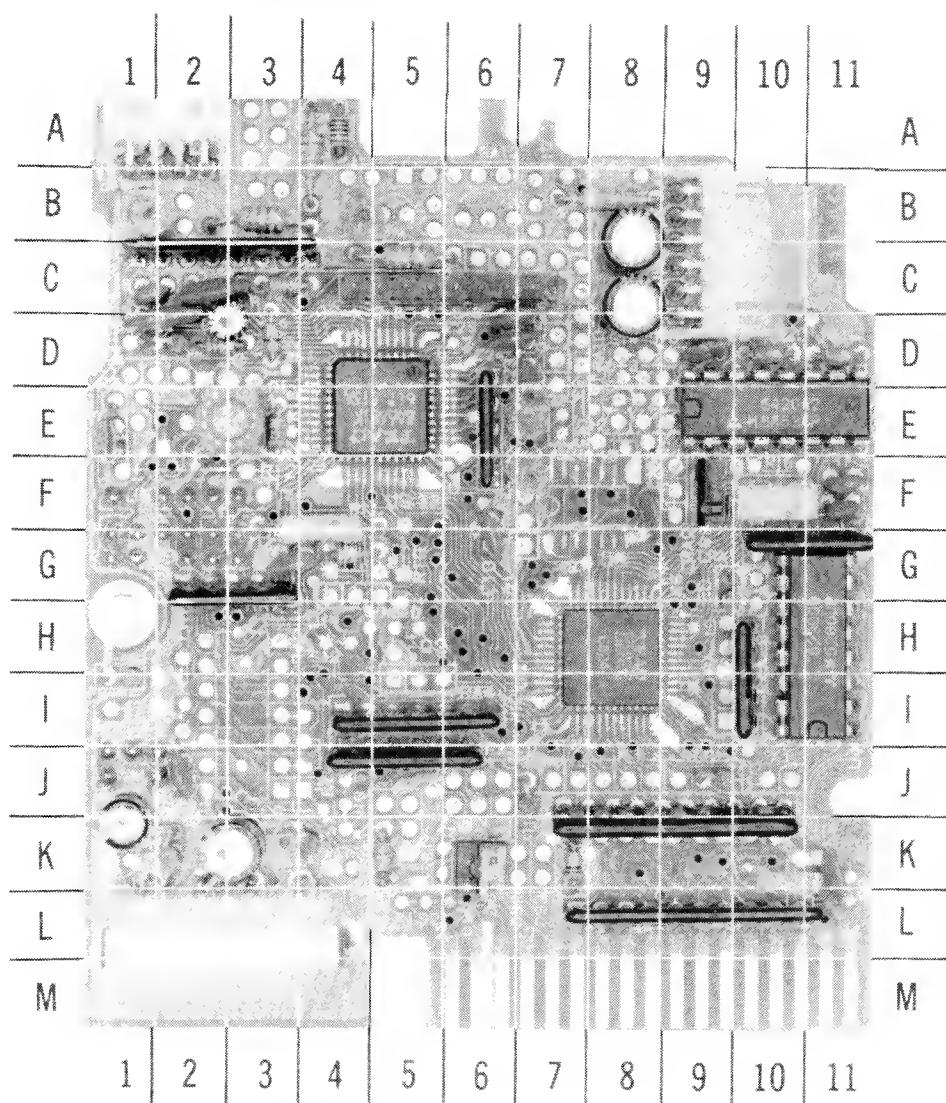

While the program is running, check for pulses at pins 18 and 20 of Connector J1. If pulses are missing, check the Drive cable and check the Disk Drive Interface circuit on the Computer System Board. If pulses are present, check for pulses at pins 4 thru 7 of Motor Driver IC (U7). If pulses are missing, check Drive Controller IC (U3). If pulses are present, check for pulses at pins 10 thru 13 of IC U7. If pulses are missing, check IC U7, Capacitors C37 and C38, Connector J6, and check the Stepping Motor (M1) windings for continuity.

- Circuitry not used in some versions
- Circuitry used in some versions
- ⊕ See parts list
- ± Ground
- Chassis

Voltages, waveforms and logic readings for the disk drive interface and disk drive taken while running the following Basic program. Readings shown were taken when the disk drive head was not moving unless noted.

NOTE: Insert a formatted diskette (not write protected) in Drive B before running the program.

- (1) Probe indicates P when head is moving.
- (2) Probe indicates L when head 0 is selected, H when head 1 is selected.
- (3) Probe indicates H when head 0 is selected, L when head 1 is selected.
- (4) Probe indicates H when head is on track 00 and L when off track 00.
- (5) Probe indicates L when head is on track 00 and H when off track 00.
- (6) Probe indicates H when head is moving in and L when head is moving out from the center of the diskette.
- (7) Probe indicates L when head is moving in and H when head is moving out from the center of the diskette.
- (8) Probe indicates H when head is moving.
- (9) Probe indicates L when head is moving.
- (10) Probe indicates H when Drive Motor is off.
- (11) Probe indicates L when Drive Motor is off.
- (12) Probe indicates L if diskette is write protected.
- (13) Probe indicates H if diskette is write protected.
- (14) Voltage varies when head is moving.

```

50 CLOSE #1
60 GOTO 10

```

Terminal identification may not be found on unit.

Capacitors are 50 volts or less, 5% unless noted.

Electrolytic capacitors are 50 volts or less, 20% unless noted.

Resistors are 1/2W or less, 5% unless noted.

Value in () used in some versions.

Measurements with switching as shown, unless noted.

Logic Probe Display

L = Low

H = High

P = Pulse

* = Open (No lights On)

Voltages measured with digital meter.

Waveforms and voltages taken from ground, unless noted otherwise.

Supply voltage maintained as shown at input.

Controls adjusted for normal operation.

TANDY
MODEL 100SX

ALIGNMENT

EQUIPMENT REQUIRED

A test program or a Disk Drive Tester is required which will turn On the Disk Drive, select side 0 or 1 and step the head to the track specified in the alignment procedures. Use a Dysan Analog Alignment Diskette 224/2A when an Alignment Diskette is specified in the alignment procedures. NOTE: This alignment diskette has only alignment patterns on it and does not contain any alignment programs.

DRIVE TRACK PROGRAM

The following Basic programs can be used to step the Disk Drive head to the Track specified by the user. To stop the program, press the Ctrl and Break keys.

NOTE: The programs select side 0 only.

Operates Drive A

```
10 CLS
20 OUT 1014,128:OUT 1010,16:OUT 1010,20
30 OUT 1013,7:S=INP(1012)
40 OUT 1013,1:S=INP(1012)
50 INPUT "ENTER TRACK NUMBER "; TR
60 IF TR>40 THEN 50
70 OUT 1010,20
80 OUT 1013,15:S=INP(1012)
90 OUT 1013,1:S=INP(1012)
100 OUT 1013,TR:S=INP(1012)
110 FOR T=1 TO 400:NEXT T
120 PRINT"PRESS ANY KEY TO STOP"
130 A$=INKEY$:OUT 1010,20:IF A$="" THEN 130
ELSE 50
```

Operates Drive B

```
10 CLS
20 OUT 1014,128:OUT 1010,33:OUT 1010,37
30 OUT 1013,7:S=INP(1012)
40 OUT 1013,1:S=INP(1012)
50 INPUT "ENTER TRACK NUMBER ";TR
60 IF TR>40 THEN 50
70 OUT 1010,37
80 OUT 1013,15:S=INP(1012)
90 OUT 1013,1:S=INP(1012)
100 OUT 1013,TR:S=INP(1012)
110 FOR T=1 TO 400:NEXT T
120 PRINT"PRESS ANY KEY TO STOP"
130 A$=INKEY$:OUT 1010,37:IF A$="" THEN 130
ELSE 50
```

SPINDLE SPEED CHECK

If a Disk Drive Tester which provides a readout of the speed in rpm is being used, check for a speed of 300 rpm ± 4.5 rpm.

If a Disk Drive Tester is not available, center and paste a strobe pattern on the Drive motor on the bottom of the Disk Drive, see Figure 1. Insert a diskette into the Drive and close the door. Type in and run the program listed under "Continuous Operation of Disk Drive" to keep the Disk Drive running. Use the outside pattern when 60 cycle fluorescent lighting is used or the Inside pattern for 50 cycle lights.

The speed is correct if the pattern appears to stand still.

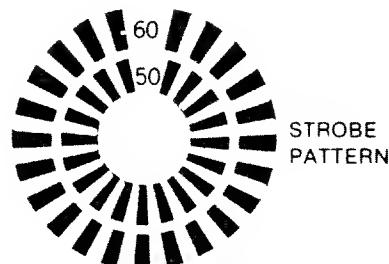

Figure 1

RADIAL HEAD ALIGNMENT

Connect the channel A input of a dual trace scope to TP7, channel B to TP8, and the external trigger input to TP1. Connect ground lead to TP6. Set the scope to add mode with one channel inverted, the sweep time to 20mSec and the voltage range to .2V. Set both scope inputs to AC. Insert the Alignment Diskette into the Disk Drive and close the door. Turn On the Disk Drive and step the head to track 16, Side 0. The cats-eye pattern shown in Figure 2 should be displayed on the scope.

EQUAL AMPLITUDE

Figure 2

The amplitude of the two lobes displayed must be within 70% of each other. If the lobes are out of tolerance, loosen two screws holding Stepping Motor (M1). Adjust Motor until the two lobes are equal in amplitude and tighten Motor mount screws. Check the adjustment by stepping the head to Track 39 and back to Track 16, then to Track 00 and back to Track 16, checking the lobes each time the head is on Track 16. Check the Track 00 Stop and Detector adjustments after performing the Radial Head Alignment. Select side 1 and check Radial alignment of Head 1 using the above procedures.

TRACK 00 SENSOR

Connect a scope to TP8 and set the sweep time to 20uSec. Set the voltage range to .2V. Insert the Alignment Diskette into the Disk Drive and close the door. Turn On the Disk Drive and set the Head to Track 00. A 125KHz sine wave should be displayed on the scope.

ALIGNMENT (Continued)

AZIMUTH CHECK

If the 125kHz signal is not present, step the head forward or back until the 125kHz signal is present. When the 125kHz signal is present on the scope, the head is on Track 00.

Connect the input of a voltmeter to TP3. Check for 5V when the Head is on Track 00 and 0V when the Head is on Track 02. If the readings are not correct, set the Head to Track 01, loosen the Track 00 Sensor (M2) screw (see Disk Drive Mechanical Photo) on the top of the Disk Drive and adjust the detector until the voltmeter reading jumps from 0V to 5V. Tighten the Track 00 screw and recheck the Track 00 Sensor adjustment.

INDEX SENSOR ADJUSTMENT

Connect the channel A Input of a dual trace scope to TP8, channel B Input to TP1 (Index pulse) and the scope ground to TP6. Set the scope display to channel A with the voltage range set to 20mV and the sweep time set to 50μS. Set the channel B Input to noninverting mode and trigger the scope on channel B with the trigger set to negative slope.

Insert the Alignment Diskette in the Disk Drive and close the door. Turn On Disk Drive, select side 0 and set the head to track 01. Confirm that the leading edge of the burst occurs 200μS ±200μS after the leading edge of the Index pulse, see Figure 3. If the Index Sensor (PQ51) is out of adjustment, loosen two screws holding the board with the Index detector on the top of the Disk Drive and adjust the Board for 200μS ±200μS, see Disk Drive Mechanical, Top View Photo. If side 0 checks good, select side 1 and repeat the above procedure to check Head 1.

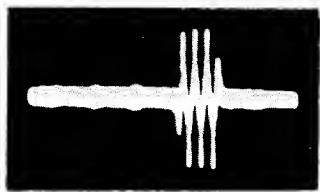

Figure 3

Connect the channel A Input of a dual trace scope to TP7, channel B Input to TP8, external trigger input to TP1 and connect the scope ground to TP6. Set the scope to add mode with channel B inverted, sweep time to .5ms, AC Input, trigger to negative slope and voltage to .1V range.

Insert the Alignment Diskette, turn on the Disk Drive, select side 0 and set the head to track 34. Confirm that the pattern appears as shown in Figure 4. The amplitude of bursts 1 and 4 must be equal to or less than the amplitudes of bursts 2 and 3.

If the azimuth of Head 0 checks good, select side 1 and repeat the above procedure to check the azimuth of Head 1.

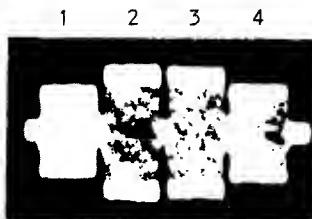

Figure 4

READ CIRCUIT ADJUSTMENT

To do this adjustment a Disk Drive Tester or program is required that will continuously write a 1F (62.5KHz) pattern on a blank diskette inserted in the Drive.

Connect the input of a scope to pin 3 of IC U4 (Read Data Line). Set the sweep time to 2u Sec, voltage range to 2V and trigger on negative slope. Insert a BLANK diskette in the Drive and close the Drive door. Continuously write a 1F pattern to the diskette. Two pulses should appear on the scope screen. If the Phase Adj Control (R1) is out of adjustment, the second pulse will appear to be two pulses out of phase, see Figure 5. If R1 is out of adjustment, adjust it until the second pulse appears to be one pulse, see Figure 6.

COMPUTERFACTS™ put easy to use, informative technical data right at your fingertips. Each edition includes specific service information on the individual component, along with some overall troubleshooting hints.

The following information is just a sample of the many valuable time saving features contained in this exclusive Sams COMPUTERFACTS publication:

- Preliminary Service Checks section is an easy to use, step by step guide for the experienced technician or hobbyist, and even beginners.
- SAMS famous industry accepted standardized notation schematics containing CIRCUITTRACE®, GRIDTRACE™, waveforms, voltages and stage identification.

- Step by Step Troubleshooting guides the technician through the necessary procedures to quickly locate the problem.

TROUBLESHOOTING**MICROPROCESSOR CHIP (CPU) OPERATION**

Verify the processor is functioning by checking the signals on the address lines (pins 10 thru 24 of IC U600) and the data lines (pins 41 thru 56) using a logic probe or a scope. If a logic probe is used, refer to the "Logic Chart" for the correct readings. If a scope is used, the waveforms on the address lines (except pins 22 and 23 which have no logic in Power Up mode) should be similar to Figure 1. The waveforms on the data lines should be similar to Figure 2.

- Logic Chart containing logic probe readings to isolate defective circuitry and components.

LOGIC

PIN NO	IC U100	PIN NO	IC U100	PIN NO	IC U102	IC U103	IC U104	IC U105	IC U106	IC U107	IC U108	IC U109
1	P	21	P	1	P	H	P	H	P	H	P	H
2	P	22	P	2	P	H	P	H	P	H	P	H
3	P	23	P	3	P	H	P	H	P	H	P	H

- Quick Component Location using the SAMS exclusive GRIDTRACE, CIRCUITTRACE, and component photographs.

- Complete Components Parts List in an easy to use format with field replacements shown when possible. SAMS unique semiconductor, chip and IC cross-reference gives you many replacements to choose from and is available at your Electronic Distributor.
